and Advisor (NTI) Dr V.K.Chada. This was followed by an elaborate lecture on Supervision, Monitoring & Evaluation of Ni-kshay and Research Priorities of NTEP. Later, the details on Case Finding and Diagnosis of Tuberculosis were explained by Dr. Ravichandra C, a well-known physician and Advisor at NTI. Then, we were introduced to the Newer Laboratory Diagnostics regarding Tuberculosis Diagnosis and Drug Sensitivity Testing by Dr. Sarika Jain, an experienced Microbiologist at NTI. In the post lunch session, we were taught in detail about the Drug Sensitive Tuberculosis Treatment Protocol by Dr. Poornima A, Obstetrician and Divisional head ACSM, NTI. The final class of the day was taken on Programmatic Management of Drug Resistant Tuberculosis by the Director of NTI, Dr. Somashekar N, MD Community Medicine. Followed by which a Question-Answer session was conducted where all our doubts were clarified. The visit ended with vote of thanks & photo session.

Educational Field Visit Report- Dec 2023

Venue: KMF Dairy, Belagavi

Beneficiaries: 26 students of Pharm D 2ndYear

The students of Pharm D 2ndYear along with Three faculty visited KMF Dairy, milk products manufacturing unit at Kanbargi Road, Belagavi, on 19th Dec 2023 from 11.00 AM to 12.30 PM.as a part of PCI Pharm D curriculum stipulations, demonstrate to the students the various sterilization processes. Dr. Satish A Kavatagimath briefed the students about the aim and objectives of the visit. During the visit,Mr. Vinayak, Microbiologist at KMF unit, lucidly apprised the students about the pasteurization process, microbial laboratories, various pasteurization & packaging equipments and prebiotics used for manufacturing different milk products. The students had an opportunity to interact with the different personnel in the manufacturing unit and clarify their doubts. Dr. Santhosh Reddy, Class teacher, Pharm D. 2nd Year coordinated and facilitated the visit. Post-visit feedback was collected and it was noted that the students highly appreciated the visit and expressed that it had helped them understand the sterilization process and the working of such a manufacturing set-up thoroughly.

The team of KLE College of pharmacy, Belagavi expressed deep sense of gratitude to the staff and officers of KMF unit for meticulously arrangements for a successful learning experience to the students.

Sub: Request for Physiotherapy for "Superbeing 2.0 – Triathlon and Duathlon"

Respected Sir,

Superbeing Sporting Academy, Belagavi in association with Thoughtflow Educatational Trust, Belgaum Pedallers Club and Belgaum Aquatics Club organizes various sporting activities and events in Belagavi. On Feb 12th 2023, we are planning to conduct "**SUPER BEING 2.0 – TRIATHLON AND DUATHLON**".

Triathlon and Duathlon are mass participant endurance events where the participants do swimming, running and cycling (Triathlon) and running and cycling (Duathlon) over a long distance.

The event is been planned for Feb 12th 2023 (Sunday). We are expecting about 150+ participants from across Karnataka.

Details of the event along with possible location and routes are as follow

Swimming – 1.9 Km in the Fort Lake

Cycling – 90km – from Fort Lake to Maratha Mandal Engineering College (via Kakati , Honaga, RCU on NH4) to Yedurappa Road Under Pass to Fort Lake (on NH4)

Running – 21 Km running in the Fort Lake Loop

Since this is a high endurance event, we need your Physiotherapy support to ensure proper recovery of athletes after the event

Thanking you

Sincerely

Ironman 2019 Australia 

Dr Kiran Khot

Sub: Request for Physiotherapy for "Superbeing 2.0 – Triathlon and Duathlon"

Respected Sir,

Superbeing Sporting Academy, Belagavi in association with Thoughtflow Educatational Trust, Belgaum Pedallers Club and Belgaum Aquatics Club organizes various sporting activities and events in Belagavi. On Feb 12th 2023, we are planning to conduct "**SUPER BEING 2.0 – TRIATHLON AND DUATHLON**".

Triathlon and Duathlon are mass participant endurance events where the participants do swimming, running and cycling (Triathlon) and running and cycling (Duathlon) over a long distance.

The event is been planned for Feb 12th 2023 (Sunday). We are expecting about 150+ participants from across Karnataka.

Details of the event along with possible location and routes are as follow

Swimming – 1.9 Km in the Fort Lake

Cycling – 90km – from Fort Lake to Maratha Mandal Engineering College (via Kakati , Honaga, RCU on NH4) to Yedurappa Road Under Pass to Fort Lake (on NH4)

Running – 21 Km running in the Fort Lake Loop

Since this is a high endurance event, we need your Physiotherapy support to ensure proper recovery of athletes after the event

Thanking you

Sincerely

PHYSIO FIRST

BY DR. VERNA D'SILVA

7th October 2023

Dear Sir / Ma'am.

Greetings from Dr. Verna's Physiofirst Goa.

We are currently looking to recruit Sports Physiotherapists to work on one of the premier sports projects of the country – 37th National Games 2023. At Physiofirst, we are proud to have been nominated as official partners for Physiotherapy services at these prestigious games, and as such this is a stellar opportunity for Physiotherapists from your institution to work on a project of this magnitude.

In total, we have a staggered requirement of about 40 outstation physiotherapists in total from the 26th of October 2023 to 8th of November '23.

The schedule of working days for outstation physiotherapist is as follows. I would need them to touchdown in Goa, 24 hours prior to the working day.

Accommodation and meals will be provided to them by Physiofirst. On the culmination of the 37th National Games 2023, the Physiotherapist who have been part of our team will receive a work experience certificate with details of the project mentioned.

Individual travel arrangements to and fro from Goa need to be made individually by the visiting Physios.

Travel arrangements will be shared to you on WhatsApp in the next 48 hours.

Thanking you in anticipation.

Sincerely,

PHYSIO FIRST

Industrial visit to Olam global Agri Commodities India. Pvt.Lmt.

KAHER Institute of Nursing Sciences Belagavi. Department of Community Health Nursing carried out industrial visit for UG final year students to Olam global Agri Commodities India. Pvt.Lmt. (sugarcane factory) at Chandgad, Maharastra on 06-04-2023.

Olam Agri is a leader in food, feed and fiber in high-growth emerging markets with proven expertise, processing capabilities and a global origination footprint. Offer customers a deep understanding of market needs, built through their on-the-ground presence in Asia and Africa over the last 30+ years. A sugar cane mill is a factory that processes sugar cane to produce raw sugar or plantation white sugar. Some sugar mills are situated next to a back-end refinery, which turns raw sugar into (refined) sugar.

Health education given on precautionary measures to prevent occupational hazards for this program, 50 PBB.Sc. IInd year students and faculty from department of community health Nursing were present and 60 factory workers were benefited from this program.

Beneficiaries: 50 PB.B.Sc. IInd year students.

VISIT REPORT

Visit to Water Treatment Plant, Laxmitek

A visit to Water Treatment Plant, Laxmitek was organized by KAHERE Institute of nursing Sciences Belagavi, department of community health nursing for the students of final year B.Sc and Diploma students of KAHER Institute of Nursing Science Belagavi on 06-06-2023. The students were accompanied by the Faculty of community health nursing department. At the water treatment plant students were divided into 2 groups and were accompanied by Mr.Vinod, clerk to give information about purification of water.

Mr. Vinod clerk explained that the raw water is received from Hidkal, Rakasakoppa and other parts of Belagavi. This water is subjected to violent agitation in mixing chamber after adding alum for few minutes. This is done to remove turbidity in the water. Alum enables suspended particles to aggregate. This water is passed into the flocculation chamber where it is agitated for 30min. It results in formation of thick precipitate. This coagulated water moves to sedimentation tank for settling down of impurities and water looks clearer. The water is subjected to rapid sand filtration for filtration. The filtered water is disinfected using chlorine which kills bacteria and makes water suitable for public consumption. This water is pumped to the reservoir tank from where it is supplies to Hindalco factory, KLE hospital, Markandaya Sugar Mills and other parts of Belagavi.

Mr. Vinod was thanked for his co-operation and his informative explanation about purification of water. Around 60 Nursing students and 05 faculty from KAHER INS benefited from the programme.

**Sub: Permission for internship rotation of Pharm D and Pharm D (PB) Sixth year students at
KLES Dr Prabhakar Kore Hospital & MRC, Belagavi**

Sir,

1. Refer to your application dated 1st July 2023 on the above subject.
2. After perusal, the undersigned has permitted your College students to carry out their rotation of Internship for Pharm D and Pharm D (PB) Sixth year at KLES Dr Prabhakar Kore Hospital & MRC Belagavi in the respective departments as per your schedule (Enclosed) for the duration of 12 months.
3. The hospital will not have any financial implications for your study.
4. As per the hospital policy, you are **NOT** permitted to give away any information/ materials/ data/statistics of the hospital to a third party. You will not send the information gathered in the hospital for publication in any form to any individual/organization. You are not permitted to modify, copy, reproduce, republish, upload, post, transmit or distribute materials of the hospital's documents. If any article is published, the conflict of interest and financial / any reimbursement received, including a line of acknowledgement made about the source of research material obtained from the hospital, be mentioned appropriately, which would be appreciated.

This is for your information.

**Sub: Permission for internship rotation of Pharm D and Pharm D (PB) Sixth year students at
KLES Dr Prabhakar Kore Hospital & MRC, Belagavi**

Sir,

1. Refer to your application dated 1st July 2023 on the above subject.
2. After perusal, the undersigned has permitted your College students to carry out their rotation of Internship for Pharm D and Pharm D (PB) Sixth year at KLES Dr Prabhakar Kore Hospital & MRC Belagavi in the respective departments as per your schedule (Enclosed) for the duration of 12 months.
3. The hospital will not have any financial implications for your study.
4. As per the hospital policy, you are **NOT** permitted to give away any information/ materials/ data/statistics of the hospital to a third party. You will not send the information gathered in the hospital for publication in any form to any individual/organization. You are not permitted to modify, copy, reproduce, republish, upload, post, transmit or distribute materials of the hospital's documents. If any article is published, the conflict of interest and financial / any reimbursement received, including a line of acknowledgement made about the source of research material obtained from the hospital, be mentioned appropriately, which would be appreciated.

This is for your information.

Industrial visit to Olam global Agri Commodities India. Pvt.Lmt.

KAHER Institute of Nursing Sciences Belagavi. Department of Community Health Nursing carried out industrial visit for UG final year students to Olam global Agri Commodities India. Pvt.Lmt. (sugarcane factory) at Chandgad, Maharastra on 06-04-2023.

Olam Agri is a leader in food, feed and fiber in high-growth emerging markets with proven expertise, processing capabilities and a global origination footprint. Offer customers a deep understanding of market needs, built through their on-the-ground presence in Asia and Africa over the last 30+ years. A sugar cane mill is a factory that processes sugar cane to produce raw sugar or plantation white sugar. Some sugar mills are situated next to a back-end refinery, which turns raw sugar into (refined) sugar.

Health education given on precautionary measures to prevent occupational hazards for this program, 50 PBB.Sc. IInd year students and faculty from department of community health Nursing were present and 60 factory workers were benefited from this program.

Beneficiaries: 50 PB.B.Sc. IInd year students.

To
The Principal
J. N. Medical College
Belagavi

Respected madam,

Sub: Posting of 2nd Year P.B.B.Sc Nursing students to Primary Health Centre Vantamuri

With reference to the subject cited above, I have the honour to inform you that, 2nd Year P.B.B.Sc Nursing Students will be posted for Community Health Nursing clinical experience from 02/01/2023 to 31/01/2023 at Sonatti Village under Vantamuri PHC. Hence I, request you to grant the permission to post them in Vantamuri PHC as per requirement of University. Kindly do the needful.

The objectives of the posting are

I. General objectives:

The students acquires skill in providing comprehensive health care to a individual, family and the community, using principles of health & Community Health Nursing

II. Behavioral objectives:

1. To study the Community
2. Identify the needs and problems of the Community
3. Plan & Conduct health education on identified health needs.
4. Learn about various organizations of community health importance.
5. Identify the health needs of various age groups.
6. To know the staffing pattern and functions of Primary Health Centre.
7. Maintain a dairy of daily activities.

Thanking You

Yours Faithfully,

(Signature)

VISIT REPORT

Visit to Water Treatment Plant, Laxmitek

A visit to Water Treatment Plant, Laxmitek was organized by KAHERE Institute of nursing Sciences Belagavi, department of community health nursing for the students of final year B.Sc and Diploma students of KAHER Institute of Nursing Science Belagavi on 06-06-2023. The students were accompanied by the Faculty of community health nursing department. At the water treatment plant students were divided into 2 groups and were accompanied by Mr.Vinod, clerk to give information about purification of water.

Mr. Vinod clerk explained that the raw water is received from Hidkal, Rakasakoppa and other parts of Belagavi. This water is subjected to violent agitation in mixing chamber after adding alum for few minutes. This is done to remove turbidity in the water. Alum enables suspended particles to aggregate. This water is passed into the flocculation chamber where it is agitated for 30min. It results in formation of thick precipitate. This coagulated water moves to sedimentation tank for settling down of impurities and water looks clearer. The water is subjected to rapid sand filtration for filtration. The filtered water is disinfected using chlorine which kills bacteria and makes water suitable for public consumption. This water is pumped to the reservoir tank from where it is supplies to Hindalco factory, KLE hospital, Markandaya Sugar Mills and other parts of Belagavi.

Mr. Vinod was thanked for his co-operation and his informative explanation about purification of water. Around 60 Nursing students and 05 faculty from KAHER INS benefited from the programme.

KAHER UNIVERSITY
BELAGAVI, KARNATAKA

ANNEXURE-II

PROFORMA FOR REGISTRATION OF SUBJECT FOR DISSERTATION

1.	Name of the Candidate and Address:	MR. VINIT SINGH DEPARTMENT OF PHYSIOLOGY, JAWAHARLAL NEHRU MEDICAL COLLEGE, BELAGAVI-590010, KARNATAKA, INDIA.
2.	Name of the Institution:	KAHER UNIVERSITY'S, JAWAHARLAL NEHRU MEDICAL COLLEGE, NEHRU NAGAR, BELAGAVI, KARNATAKA, INDIA.
3.	Course of Study and Subject:	MBBS PHASE 1
4.	Date of Admission to Course:	15 November 2022
5.	Title of The Topic:	“EFFECT OF REHABILITATIVE EXERCISES AND TELEREHABILITATION IN RECOVERY FROM PARASPINAL MYALGIA POST-COVID 19 IN MANUAL LABORERS OF BELGAUM, NORTH KARNATAKA: A QUASI-EXPERIMENTAL STUDY.”

INTRODUCTION & NEED FOR STUDY:

The Covid-19 pandemic has a devastating effect throughout the world. While most patients with mild infection recover within 2-3 months, a large percentage of patients experience symptoms persisting much longer which is termed as the Long Covid Syndrome (LCS). One of the significant symptoms of LCS is Paraspinal Myalgia (1). LCS related myopathy can result in muscle weakness, spasms, and is associated with denervation atrophy, deconditioning and sarcopenia in patients (1) which adversely affects their daily life. Globally around 72% patients with post-acute COVID-19 reported fatigue, while spine pain was present in 71% patients and myalgias and arthralgias were noted in 61% and 44% of patients, respectively (2). Of the variety of cytokine storm and chemokine response, IL-17 was found to have closest molecular signature to Long Covid. (3)

A widely known method to treat musculoskeletal pain in patients is use of Jacobson's Progressive Muscle Relaxation Therapy (PMRT). PMRT is a type of relaxation therapy that

involves tensing and relaxing a group of muscles in a specific sequence along with controlled breathing. PMRT is known to help decrease pain in non-pharmacological ways (4). There is extensive research on positive effects of PMRT in reducing postoperative pain in patients, especially in surgeries of the paraspinal region (5), and improvement in overall quality of life in patients (6). Spinal Muscle Training (SMT) will be incorporated along with PMRT to complement the recovery of participants. Research studies suggest that SMT involving spinal flexion and extension exercises is helpful in faster recovery from low back pain problems (7).

By 2021, the World bank predicted a 64 % of population residing in rural India. A potential way to address health needs and patient compliance is Telerehabilitation (TR). TR involves coaching, consultation, and evaluation through audio and video conferencing sessions, hence bridging cost commutes, increasing participation, eliminating healthcare worker shortages and helping with better coordination with the participants to improve outcomes. As a policy directive for Digital India framed by Ministry of Health and Family Welfare, TR has shown promising results in rural areas. The target population of this study are the laborers of Belgaum district, North Karnataka, who developed Paraspinal myalgia due to LCS which adversely affected their ability to perform their daily occupation.

This study aims to bridge the gap between health education and management and transform healthcare to underutilized areas for better patient compliance and effective options for caregivers.

OBJECTIVES OF THE STUDY –

- a) **Primary Objectives:** To evaluate the effect of PMRT and SMT in the recovery of manual laborers aged 40 – 50 years suffering from paraspinal myalgia post COVID-19 infection, over 16 weeks.
- b) **Secondary Objectives:** To assess the effectiveness of the above-stated methods on reduction of pain and disability in the study population using –
 - i) Oswestry Disability Pain Index
 - ii) Katz Index of Activities of Daily living
 - iii) Pre & Post Telerehabilitation Questionnaire

METHODOLOGIES

- **Study design** – Quasi-Experimental Study
- **Sampling technique** – Cluster sampling
- **Venue** – Department of Neurosurgery Recovery room at KLE'S Prabhakar Kore Charitable Hospital
- **Study population** – 60 participants to be selected from the department of Neurosurgery, KLEs Prabhakar Kore Charitable Hospital, Belgaum, who reported paraspinal myalgia post Covid-19 infection.
- **Sampling Frame** – Males aged 40-50 years suffering from paraspinal myalgia.
- **Sample Size = Total of 60 participants with 30 in each group**
Formula –
The sample size (n) is calculated according to the formula: $n = \frac{z^2 * p * (1-p) / e^2}{1 + (z^2 * p * (1-p) / (e^2 * N))}$
Where:
z = 2.33 for a confidence level $\alpha = 98\%$,
p = proportion (expressed as a decimal),
N = population size,
e = margin of error.
z = 1.96, p = 0.95, N = 60, e = 0.046
n \approx 36
Anticipating 20% loss to follow up
n = 30 each group
- **Inclusion Criteria –**
 - a) Males of 40 – 50 years of age, indulging in hard manual labor.
 - b) Have been infected with COVID-19 and developed paraspinal myalgia post-infection.
 - c) Free from heart disease and diabetes mellitus.
- **Exclusion criteria –**
 - a) People using muscle relaxants.
 - b) Female laborers due to higher risk of osteoporotic fractures in women of that age group (8).
 - c) Patients suffering from rheumatoid, psoriatic arthritis myositis.
- **Arms and Interventions –**
 - a) Experimental group – The participants will receive PMRT & SMT under guided supervision.
 - b) Non-Experimental Group – The participants will receive Standard Neurosurgical care (SNC) only.

- **Data Collection Methods –**

- a) Pre & post-experiment testing through Cytokine IL17 biomarker measurement to assess the level of Long Covid Inflammation and pain in both experimental and non-experimental groups. (3)

Test used – Finetest Human IL-17 ELISA Kit

Range – 31.25 – 2000 pg/ml

Sensitivity – 18.75 pg/ml

- b) Oswestry Disability index –

It was developed by Fairbank et al (1980) and it has been used to measure functional disability in people with low back pain. This questionnaire consists of ten questions that assess the level of pain and its interference with several physical activities: sleeping, self-care, sex life, social life, and traveling.

For each question, there are possible 5 points, the first option being 0, the second option being 1 point, and so on till 5 points for the 6th option.

Scoring System –

0 – 4 points: No disability

5 – 14: Mild disability

15 – 24: Moderate disability

25 – 34: Severe disability

35 – 50: Completely disabled

- c) Katz Index of Activities of Daily living –

It was developed by Katz et al (1963). This is a tool to assess functional status of the participant's ability to perform activities of daily living independently. The Index ranks adequacy of performance in six functions: bathing, dressing, toileting, transferring, continence, and feeding. One point means the person is independent; zero points means the person requires supervision and personal assistance.

- d) Pre & Post Telerehabilitation Questionnaire

- **Experimental Protocol –**

- i) This study will involve the formation of two Focused self-help groups, the experimental group receiving – PMRT & SMT and the non-experimental group receiving SNC only.
- ii) Participants will be asked to attend the sessions physically 3 days in the first week in respective OPD and IPD at the hospital, and follow-ups will be conducted post-discharge through Telerehabilitation, to assess their responses personally effectively.
- iii) Procedure of Telerehabilitation post discharge from the hospital –

The Experimental and non-experimental groups will be engaged in separate zoom video calls of 60 minutes, 3 alternate days a week. Participants will be asked to answer the TR Questionnaire in a diary, before and after every TR session. They will be assessed personally during these sessions

regarding their pain and daily life activities, post which the participants will be engaged in their respective protocols mentioned below.

iv) SOP for the experimental group sessions –

1) Warm-up: 5 minutes

- Pelvic Tilts - 10 repetitions x 2 sets
- Single Leg Raises – 10 x 2
- Prayer's stretch – 30 seconds hold x 2
- Cat-Cow Stretch - 30 seconds hold x 2

2) Exercise period: 20 minutes

- Collateral Muscle training – 30 sec rest in between each set
- VMO strengthening exercise - 15 x 2
- Clamshells exercise - 15 x 2
- Oblique strengthening exercise - 10 x 2
- Pyriformis Stretch - 30 sec hold x 2

Spinal muscle training –

- Superman's exercise. - 10 sec hold x 8
- Jefferson Curls for Laminectomy patients – 10 x 3
- Bird Dog for spinal fusion patients - 8, 6, 4

3) Guided PMRT procedure (9) & Cooldown – 15 minutes

v) SNC SOP for non-experimental group sessions –

1) Warm-up: 5 minutes

- Pelvic Tilts - 10 repetitions x 2 sets
- Single Leg Raises – 10 x 2
- Prayer's stretch – 30 seconds hold x 2
- Cat-Cow Stretch - 30 seconds hold x 2

2) Exercise period: 15 minutes

- Hip knee flexion extension - 10 repetitions x 2 sets
- Static back exercise - 1 min. holds x 3
- Clamshells - 15 x 2
- Tummy tuck holds - 15 x 2
- Static quads - 15 x 2

3) Cooldown – 5 minutes

● STATISTICAL ANALYSIS TOOLS –

1) Chi-square test –

For categorical variables to compare between different groups.

2) ANOVA Test –

For testing three or more independent variables.

3) Student t-test

For normally distributed quantitative variables to compare between two studied groups.

4) Logistic Regression test –

Used to examine the association of (continuous) independent variable(s) with one *dichotomous* dependent variable.

● **Ethical Considerations –**

- i) The study shall start after obtaining the Institutional Ethics Committee (IEC) approval.
- ii) Voluntary written informed consent will be taken from the participants, and the right to withdraw from the study will be ensured at any time.

IMPLICATIONS

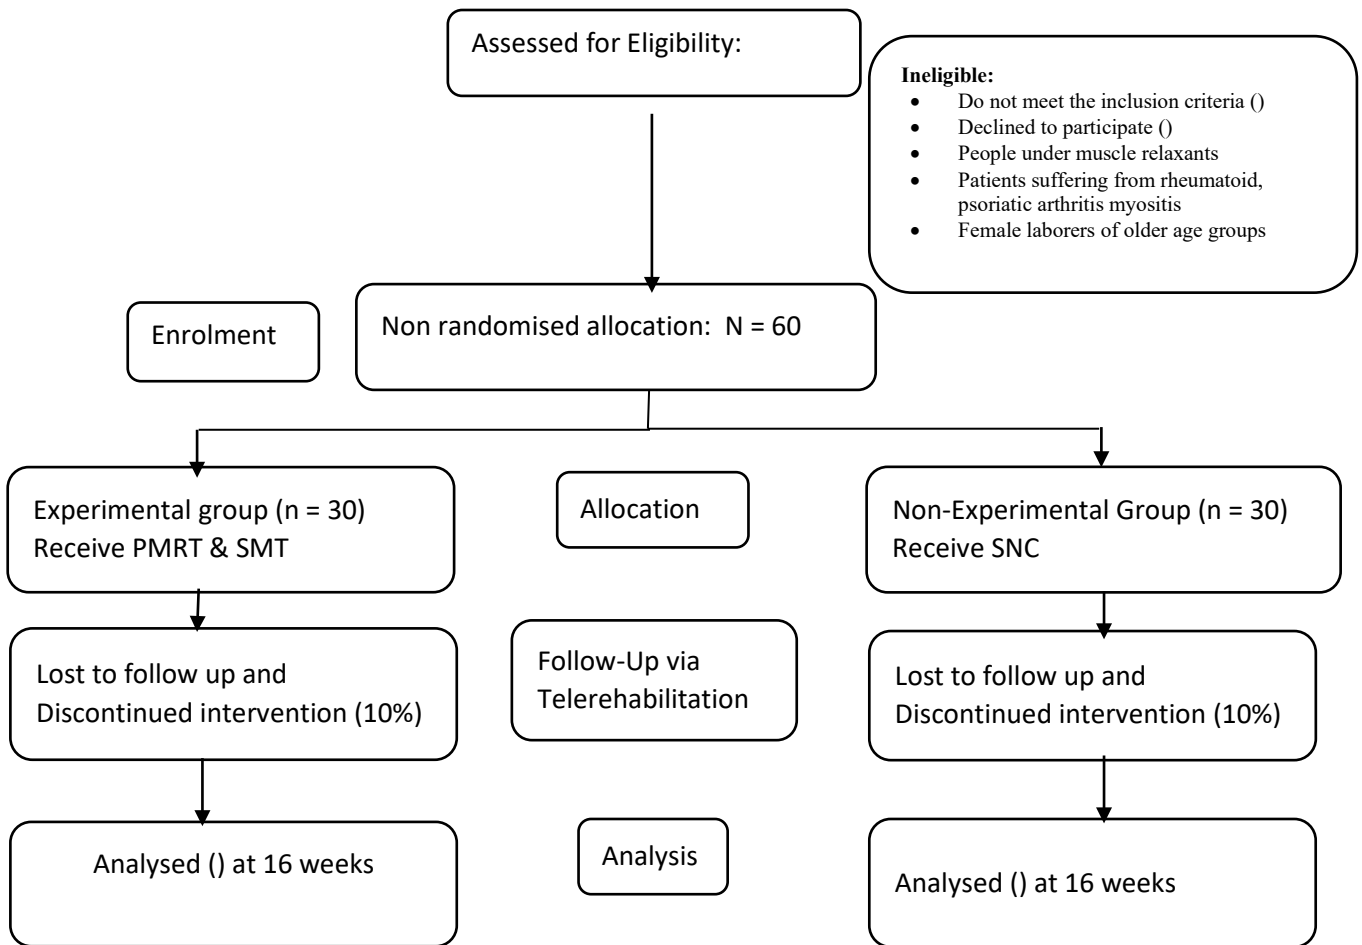

The consequences of the long COVID-19 are impacting healthcare resources, as up to 30% due to prolonged disability induced by COVID-19 rather than mortality. Knowledge of long-term outcomes among COVID survivors with paraspinal myalgia is scarce. Understanding Effective muscle relaxation therapies can prevent the development of long-term complications and guide strategies in the future. Our study tries to meet the health needs by incorporating treatment modalities into Telerehabilitation and making it a more home-based application and a cost-effective flexible way for service delivery.

INFORMED CONSENT

Introduction: Mr/Ms/Mrs you are invited to participate in the research study “EFFECT OF REHABILITATIVE EXERCISES AND TELEREHABILITATION IN RECOVERY FROM PARASPINAL MYALGIA POST-COVID 19 IN MANUAL LABOURERS OF BELGAUM, NORTH KARNATAKA: A QUASI-EXPERIMENTAL STUDY.” Conducted by the Undergraduate Student of physiology under the guidance of Dr. Nirmala S Anand Professor of the Department of Physiology, Jawaharlal Nehru Medical College, Belagavi. The study will be conducted in the Department of Neurosurgery Recovery room at KLE’S Prabhakar Kore Charitable Hospital. Participation is purely voluntary.

Purpose of the study: TO ASSESS THE EFFECTIVENESS OF PROGRESSIVE MUSCLE RELAXATION TECHNIQUES, SPINAL MUSCLE TRAINING AND TELEREHABILITATION IN THE RECOVERY OF MANUAL LABORERS OF AGE GROUP 40 – 50 YEARS SUFFERING PARASPINAL MYALGIA POST-COVID 19 INFECTION.

Procedure: Rehabilitation exercises will be provided to the participants under guided supervision and all safety measures will be assured.

Risk: No risk for participants

Benefits: The Result of this study will be helpful to the participants in recovering from their pain.

Confidentiality: Your identity will not be revealed, all the information collected will be coded so that no one will know your identity.

Compensation: There is no commitment from the researchers in this study to provide compensation. Your participation is voluntary and you will not be paid any remuneration amount for your participation.

Contacts: If you have any questions about this study, please contact study investigator Mr. Vinit Singh (8446562696) (MBBS 1st Year), JNMC Belagavi.

Withdrawal Participants: This study is voluntary and if you do not wish to participate in the study you are free to withdraw your consent and discontinue participation at any time during course of study.

CONSENT STATEMENT

I hereby voluntarily agree to take part in this study. The study conduct has been read by me and I have fully understood the nature of study, risks and benefits. I was also given an opportunity to ask question and seek clarifications.

STANDARD APPLICATION FORMAT

Introduction & Need for Study:

Music therapy is the clinical and evidence-based use of music interventions to accomplish individualized goals within a therapeutic relationship by a credentialed professional who has completed an approved music therapy program.^[1] An evidence-based treatment that helps with a variety of disorders including cardiac conditions, depression, autism, substance abuse and Alzheimer's disease.

CBT involves multiple individual sessions with a trained therapist. The patients feel that they are in a safe space in order to confront painful or difficult thoughts, feelings and situations. In some cases, sessions can take place remotely. There are a number of different elements and strategies used in CBT, including education (specifically, "psychoeducation") to help identify unhealthy thoughts and coping skills training that might include deep breathing and muscle relaxation techniques. Music is used to reinforce some behaviors and modify others. This approach is structured, not improvisational, and may include listening to music, dancing, singing, or playing an instrument.

To address negative thinking, CBT often includes a technique called reframing. Reframing is a way to think about a problem differently. For example, someone who struggles with road rage might usually assume the worst of another driver. CBT would suggest a different perspective, with more concern for the other person. Maybe that other driver was dealing with a medical emergency, or terrified about being late to work, or struggling with something in their

personal life that has nothing to do with you. This approach can help build empathy for others, instead of anger.

The impact of various genres of music and musical activities as a form of positive reinforcement, the ability of music to serve as a stimulus for new behaviour to be developed, its accessibility as a pleasant event, and its ability to evoke mood change make music a valuable resource.

CBMT practitioners utilize music therapy activities such as songwriting, lyric substitution, and improvisation that are commonly employed by music therapists of other persuasions. However, for cognitive-behavioral music therapists, their intentions for presenting these activities and the manner in which the activities are implemented represent the specific values of cognitive and behavioral ideologies.

Benenzon Model of Music Therapy (BMMT) combines some concepts of psychoanalysis with the process of making music. It includes the search for the patients "musical sound identity," which describes the external sounds that most closely matches the internal psychological state. A music therapy framework based on non-verbal psychoanalytical^[2] theories.

The sessions will be developed with a weekly frequency. The sessions will comprise of active and passive techniques with the understanding that the singing, playing, improvising and listening are musical activities that are used for therapeutic purposes and are determined by the individual characteristics. This session can take place in a group of 20-30 patients comprising both the genders.

Treatment will include pieces of music of various genres depending on the Musical History of patients. The genre of music the patients like to hear and usually hear.

The subject population of our research project will be Onco-survivors. We would do a qualitative as well as quantitative study. We will do a study which would include the following parameters – the effect of a specific music genre on Anxiety, Depression and the brain activity using EEG and BERA.

Rates of depression in cancer survivors five years following diagnosis were demonstrated to be 8-24%. Approximately 18-20% of long-term cancer adult survivors report anxiety symptoms. Musical training can have strong effects on the structural and cognitive development of brain. ^[3-7]

Objectives: -

The objectives of this research is to see the effect of the parameters that are attention, activity of daily living, task behaviour, cardiac autonomic activity and pain threshold by music therapy on Oncosurvivors. We will club attention and task behaviour as Cognitive and Cardiac Activity.

Experimental protocol: -

The subject was prepared with an EEG recording cap with 19 electrodes (Ag/AgCl sintered ring electrodes) placed in the international 10/20 system. Impedances were checked below 5 kilo Ohm. The EEG recording system (Recorders and Medicare Systems) was operated at 256 sample/s recording on customized software of RMS.

The data was band-pass-filtered between 0 and 50 Hz to remove DC drifts. Each subject was seated comfortably in a relaxed condition in a chair in a shielded measurement cabin. They were also asked to

close their eyes. After initialization, a 20 min recording period was started, and the following protocol was followed:

1. 2 min 30 seconds “Before imagination”
2. 2 min 30 seconds “While imagination raga Jay Jayanti
3. 2 min 30 seconds “After imagination”
4. 5 min resting period
5. 2 min 30 seconds “Before Listening”
6. 2 min 30 seconds “With listening raga Jay Jayanti”
7. 2 min 30 seconds “After listening”.

We divided each of the experimental conditions in three windows of 45 seconds each and calculated the cross-correlation coefficient for each window.

Methodology: -

An electroencephalogram (EEG) is a test that measures electrical activity in the brain using small, metal discs (electrodes) attached to the scalp. Brain cells communicate via electrical impulses and are active all the time, even during asleep. This activity shows up as wavy lines on an EEG recording.

Brainstem Evoked Response Audiometry (BERA) is an objective test to understand the transmission of electrical waves from the C-8 nerve to the brainstem, in response to sounds given through the ear. Stimulus is given in the form of a click sound or tone pip, via an ear phone or head phone. The stimulus is of varying loudness and of the frequency range from 1000 to 4000 Hz.

The auditory evoked potential signals produced by the brainstem are recorded as waves containing peaks and troughs. The peaks are

positive potentials that are recorded from the electrode at the vertex and are marked as wave I, wave II and so on up to wave VII.

- Cochlear nerves – Wave I and Wave II
- Cochlear nucleus (Brainstem) – Wave III
- Superior olivary complex – Wave IV
- Lateral lemniscus – Wave V
- Inferior colliculus (Midbrain) – Waves VI and VII

Hamilton Anxiety Rating Scale (HARS) is clinician-rated scale that is intended to provide an analysis of the severity of anxiety in adults, adolescents, and children. It is scored based upon the composite rating of fourteen individually evaluated criteria.

The scale consists of 14 items designed to assess the severity of a patient's anxiety. Each of the 14 items contains a number of symptoms, and each group of symptoms is rated on a scale of zero to four, with four being the most severe. All of these scores are used to compute an overarching score that indicates a person's anxiety severity.

The 14 designed items are: -

1. Anxious mood: Worries, anticipation of the worst, fearful anticipation, irritability.
2. Tension: Feelings of tension, fatigability, startle response, moved to tears easily, trembling, feelings of restlessness, inability to relax.
3. Fears: Of dark, of strangers, of being left alone, of animals, of traffic, of crowds.
4. Insomnia: Difficulty in falling asleep, broken sleep, unsatisfying sleep and fatigue on waking, dreams, nightmares, night terrors.
5. Intellectual: Difficulty in concentration, poor memory.
6. Depressed mood: Loss of interest, lack of pleasure in hobbies, depression, early waking, diurnal swing.

7. Somatic (muscular): Pains and aches, twitching, stiffness, myoclonic jerks, grinding of teeth, unsteady voice, increased muscular tone.
8. Somatic (sensory): Tinnitus, blurring of vision, hot and cold flushes, feelings of weakness, pricking sensation.
9. Cardiovascular symptoms: Tachycardia, palpitations, pain in chest, throbbing of vessels, fainting feelings, missing beat.
10. Respiratory symptoms: Pressure or constriction in chest, choking feelings, sighing, dyspnea.
11. Gastrointestinal symptoms: Difficulty in swallowing, wind abdominal pain, burning sensations, abdominal fullness, nausea, vomiting, borborygmi, looseness of bowels, loss of weight, constipation.
12. Genitourinary symptoms: Frequency of micturition, urgency of micturition, amenorrhea, menorrhagia, development of frigidity, premature ejaculation, loss of libido, impotence.
13. Autonomic symptoms: Dry mouth, flushing, pallor, tendency to sweat, giddiness, tension headache, raising of hair.
14. Behavior at interview: Fidgeting, restlessness or pacing, tremor of hands, furrowed brow, strained face, sighing or rapid respiration, facial pallor, swallowing, etc.

Each item is scored independently based on a five-point, ratio scale. A rating of 0 indicates that the feeling is not present in the patient. A rating of 1 indicates mild prevalence of the feeling in the patient. A rating of 2 indicates moderate prevalence of the feeling in the patient. A rating of 3 indicates severe prevalence of the feeling in the patient. A rating of 4 indicates a very severe prevalence of the feeling in the patient.

Upon the completion of the evaluation, the clinician compiles a total, composite score based upon the summation of each of the 14

individually rated items. This calculation will yield a comprehensive score in the range of 0 to 56. It has been predetermined that the results of the evaluation can be interpreted as follows. A score of 17 or less indicates mild anxiety severity. A score from 18 to 24 indicates mild to moderate anxiety severity. Lastly, a score of 25 to 30 indicates a moderate to severe anxiety severity.

Quality of life is defined by the WHO as “individuals' perceptions of their position in life in the context of the culture and value systems in which they live and in relation to their goals, expectations, standards and concerns.

Domain I - Physical

- 1 Pain and discomfort
- 2 Energy and fatigue
- 3 Sexual activities
- 4 Sleep and rest
- 5 Sensory functions

Domain II - Psychological

- 6 Positive feelings
- 7 Thinking, learning, memory and concentration
- 8 Self-esteem
- 9 Bodily image and appearance
- 10 Negative feelings

Domain III - Level of independence

11 Mobility

12 Activities of daily living

13 Dependence on medicinal substances and medical aids

14 Dependence on nonmedicinal substances (alcohol, tobacco, drugs)

15 Communication capacity

16 Work capacity

Domain IV - Social relationships

17 Personal relationships

18 Social support

19 Activities as provider/supporter

Domain V - Environment

20 Freedom, physical safety and security

21 Home environment

22 Work satisfaction

23 Financial resources

24 Health and social care: accessibility and quality

25 Opportunities for acquiring new information and skills

26 Participation in and opportunities for recreation/ leisure activities

27 Physical environment (pollution/noise/traffic/climate)

28 Transport

Domain VI - Spirituality/religion/personal beliefs

The questions are: -

1. Do you worry about your pain or discomfort?
2. To what extent do you feel that (physical) pain prevents you from doing what you need to do?
3. How easily do you get tired?
4. Do you have any difficulties with sleeping?
5. How much do you enjoy life?
6. How much confidence do you have in yourself?
7. Is there any part of your appearance which makes you feel uncomfortable?
8. How much do any feelings of sadness or depression interfere with your everyday functioning?
9. How alone do you feel in your life?
10. How much do you need any medical treatment to function in your daily life?
11. How much do you worry about your safety and security?
12. Do you have financial difficulties?
13. How much do you enjoy your free time?
14. To what extent do you have problems with transport?
15. To what extent can you count on your friends when you need them?
16. How satisfied are you with the quality of your life and health?
17. How satisfied are you with your ability to make decisions?
18. How satisfied are you with your ability to provide for or support others?
19. Do you feel happy about your relationship with your family members?
20. How often do you have negative feelings, such as blue mood, despair, anxiety, depression?
21. How much do any difficulties in mobility bother you?

22. To what extent do you feel your life to be meaningful?
23. To what extent do your personal beliefs give you the strength to face difficulties?

Previous Experimental Investigations: -

In 2006, breast cancer was the third leading cause of death in American women; however, more women survive breast cancer than any other type of cancer. As the disease progresses, it is important to know how one's health-related quality of life (QOL) is affected for those who receive treatment, those who survive, and those who remain disease-free. The purpose of this study was to summarize the benefits, challenges, and barriers of QOL measurement for female breast cancer patients. A PubMed literature search was conducted using the terms "quality of life" and "breast cancer."

From the results, a detailed outline of QOL instruments is presented, and the effectiveness of QOL instruments is discussed. In the current literature review, both generic and breast cancer specific QOL instruments, examining computerized and paper-and-pencil versions, are explained as well as the advantages, acceptability, and problems of these assessments. Potential barriers to implementation are also discussed. The implementation of QOL assessment tools in breast cancer clinical practice is discussed, with evidence detailing how such tools would benefit patients.

Two major changes in cancer medicine have occurred over the past decade. The first is recognition that the patient's well-being is important to cancer treatment. Another is the use of QOL and psychosocial questionnaires to assess their well-being. Since the time of Hippocrates, QOL has been an implied medical outcome ^[8]. QOL instruments currently are being used in clinical trials to predict

survival, response to treatment, and to screen for psychological morbidity ^[9].

Findings by Ganz and Goodwin revealed that with the number of survivors growing in recent years, breast cancer patients have been assessed with multiple QOL instruments in order to compare the effects of breast cancer and its treatments to those of people with other chronic illnesses as well as to healthy women.

Donaldson^[10] states that patients report both positive and negative effects of their diagnosis and treatment. QOL assessments can be used in diagnosis, predicting prognosis, assessment, patient monitoring, clinical decision-making, communication, and treatment.

Instrumental in reviewing breast cancer outcomes, Mandelblatt and colleagues (2004) conducted a meta-analysis utilizing 230 articles from 1990 to 2000. Primary conclusions drawn from this study include the majority of articles utilized health-related QOL outcomes, no single instrument was utilized in more than 10% of all the articles, most articles had a primarily white population and did not focus on elderly breast cancer patients, and methodological flaws were prevalent throughout the studies analyzed.

Because of the complexity of breast cancer and the diverse nature of its patient population, no one instrument is both comprehensive and sensitive enough to report clinically meaningful changes in all outcomes across all phases of care and has satisfactory respondent or provider burden. However, based on Mandelblatt's et al. comprehensive meta-analysis of breast cancer outcomes literature, they believe it is possible to develop a "core" set of questions to measure breast cancer outcomes. After reviewing the articles retrieved in the PubMed search, 21 QOL instruments were identified as being the most used assessments within the breast cancer population.

97% of the patients stated that the QOL profile provided an accurate summary of their functioning and well-being. Fifty-seven percent reported their physicians used the profile explicitly during their visits, 79% believed the profile enhanced physician awareness of their health problems, and 87% thought it would be useful to introduce a QOL assessment as a standard part of the outpatient clinical experience.

The effect of EEG biofeedback on reducing post cancer cognitive impairment (PCCI):

PCCI is observed in a substantial number of breast cancer survivors, persisting for as long as 20 years in some subgroups. Although compensatory strategies are frequently suggested, no restorative interventions have yet been identified. This study examined the feasibility of EEG biofeedback ("neurofeedback") and its potential effectiveness in reducing PCCI as well as the fatigue, sleep disturbance, and psychological symptoms that frequently accompany PCCI.

All 23 participants completed the study, demonstrating the feasibility of EEG biofeedback in this population. Initially, the sample demonstrated significant dysfunction on all measures compared with general population norms. Repeated-measures ANOVAs revealed strongly significant improvements ($P < .001$) on all 4 cognitive measures (perceived cognitive impairment, comments from others, perceived cognitive abilities, and impact on quality of life [QOL]), the fatigue scale, and the 4 psychological scales (somatization, depression, anxiety and global severity index) as well as on 3 of 8 sleep scales (quality, daytime dysfunction, and global). Two of the other sleep scales (latency and disturbance) were significant at $P < .01$, and 1 (use of medication) at $P < .05$; 2 were not significant. Improvements were generally linear across the course of training,

and were maintained at the follow-up testing. At the follow-up testing, the sample no longer differed significantly from normative populations on 3 of the 4 FACT-Cog measures (impairment, impact on QOL, and comments), FACIT-Fatigue, PSQI sleep quality and habitual efficiency, or any of the BSI-18 measures of psychological disturbance. Data from this limited study suggest that EEG biofeedback has potential for reducing the negative cognitive and emotional sequelae of cancer treatment as well as improving fatigue and sleep patterns.

WHY MUSIC THERAPY FOR ONCOSURVIVORS?

The Use of Music Therapy During the Treatment of Cancer Patients: A Collection of Evidence: We found a total of 12 clinical studies conducted between 2001 and 2011 comprised of a total of 922 patients. Eight studies had a randomized controlled design, and four studies were conducted in the field of pediatric oncology. Studies reported heterogeneous results on short-term improvements in patients' mood and relaxation and reduced exhaustion and anxiety as well as in coping with the disease and cancer-related pain. Case descriptions showed similar effects in expressing emotions, opening up new goals, and turning the mind toward a healthy process and away from a disease-centered focus.

The use of music therapy in the integrative treatment of cancer patients is a therapeutic option whose salutogenetic potential is shown in many case studies such as those presented here. Study results, however, did not draw a conclusive picture of the overall effect of music therapy. In addition to further clinical trials, the evidence mosaic should be complemented with qualitative studies, single case descriptions, and basic research.

4.	Name of the Co Guide (in Block Letters) and contact details (mobile no and email ID)	
5.	Name of the Institution	KAHERs JAWAHARLAL NEHRU MEDICAL COLLEGE
6.	Title of the proposed research project:	Influence of different music genres on autonomic system functionality regulating various systemic physiological functions.
7.	Introduction and Need for the study:	<p>As music listening is a popular activity of daily life, it is of utmost importance to study the effects of music listening on psychobiological stress in everyday, daily-life settings. Music is widely used to enhance well-being, reduce stress, and distract patients from unpleasant symptoms. Although there are wide variations in individual</p>

preferences, music appears to exert direct physiologic effects through the autonomic nervous system. It also has indirect effects by modifying caregiver behaviour. Music effectively reduces anxiety and improves mood for medical and surgical patients¹, for patients in intensive care units and patients undergoing procedures, and for children as well as adults.

Music is a low-cost intervention that often reduces surgical, procedural, acute, and chronic pain. Music also improves the quality of life for patients receiving palliative care, enhancing a sense of comfort and relaxation. Providing music to caregivers may be a cost-effective and enjoyable strategy to improve empathy, compassion, and relationship-centered care while not increasing errors or interfering with technical aspects of care. Although music is predominantly utilized for religious, enjoyment, or entertainment purposes, it is gradually emerging as a promising non-pharmacological intervention for improving health outcomes in both healthy and diseased populations, especially in those with cardiovascular diseases². As such, music of various genres and types has been postulated to possess features that stimulate or inhibit the autonomic nervous system, which leads to variable effects on cardiovascular function. However, music intervention has not been adequately explored as a cardiovascular therapeutic modality due to the lack of extensive studies with a qualitative methodology. Thus, this systematic review aims to explore the available literature on the effect of music on the cardiovascular system, discuss the limitations of current research, and suggest future directions in this field.

The prevalence of pre-hypertension is higher among young adults and may increase the risk for hypertension and cardiovascular morbidity. Music therapy has been investigated to reduce blood pressure in the hypertensive population³; however, its efficacy on blood pressure in pre-hypertensive young adults is not known. As pharmacological treatment of hypertension has become a burden worldwide, the study looked into nonpharmacological ways of reducing blood pressure⁴.

Thus, all these encourage us to look into the Effect of different genres of music on the autonomic system regulating various systemic physiological functions. Therefore, in this study, we aim to find how listening to music affects our psychobiological behaviour, so the following study was aimed.

	<p>Objective of the study</p> <ul style="list-style-type: none"> • To assess the influence of Classical music on autonomic control of sweat-reflex, cardiovascular system, respiratory system and pupillary reaction. • To assess the influence of Jazz music on autonomic control of sweat-reflex, cardiovascular system, respiratory system and pupillary reaction. • To assess the influence of hip-hop music on autonomic control of sweat-reflex, cardiovascular system, respiratory system and pupillary reaction. • To assess the influence of pop music on autonomic control of sweat-reflex, cardiovascular system, respiratory system and pupillary reaction. • To assess the influence of Rock music on autonomic control of sweat-reflex, cardiac and vascular systems, respiratory system and pupillary reaction.
<p>8.</p>	<p>Materials and Methods</p> <p>8.1 Source of Data: Adolescent in the age group of 18-25yrs, belonging to student community of our college will be enrolled in our study.</p> <p>8.2 Study Design: Cross-sectional interventional trial.</p> <p>8.3 Study Period: 2months (Part of STS-ICMR project proposal)</p> <p>8.4 Sample Size: 30</p> <p>8.5 Sampling technique: Simple random sampling</p> <p>8.6 Inclusion Criteria: Adolescent in the age group of 18-25yrs, belonging to student community of our college will be enrolled in our study.</p> <p>8.7 Exclusion Criteria: Students with history of hearing impairments, history of drug abuse, smokers, alcoholics, suffering from cognitive disorders, GI disturbances, skin complaints requiring rigorous treatment, Respiratory infections and refractive errors will be excluded.</p> <p>8.8 Study protocol: Consort flow chart for RCTs: NIL</p> <p>8.9 Data collection procedure:</p> <p>6 students with 3girls and 3boys will be part of 1 group. Such 5 groups will be part of 5 groups with different music genres. Following will be the 5 genres of music used, the music chosen will be instrumental in all genres's.</p>

Group 1: Classical – Classical instrumental flute music (Raga Malkauns)

Group 2: Jazz – TrinitySnarky Puppy.

Group 3: Hip hop - “KARMA III” Hip Hop Instrumental Beat.

Group 4: Pop – Instrumental pop music by Sonu Nigam

Group 5: Rock - Nirvana, AC/DC, Deep Purple, Metallica Heavy Metal Hard Rock Music Instrumental 80’s & 90’s

Autonomic tests for various systems:

All the participants will undergo following test with background music of their allotted genres of music. A break of 15minutes will be given between 2 tests where no music will be played and the participant will be made to sit in silence.

• **Skin**

The skin area over the right forearm will be manually dried and completely covered with an indicator dye (povidone-iodine mixed with cornstarch and mineral oil for liquefaction). The color change of the used indicator marks the appearance of sweat droplets on the skin. The core temperature will be raised by 1 °C by immersion of the hand in hot water (oral temperature measured by a digital thermometer). Normally, sweating will occur within 2 minutes. Color change due to axon-reflex sweating will be assessed by repeated digital photography with pictures taken every 15 s over a general time of 7 min. Time of onset and progression will be compared in all participants.

• **Cardiovascular system**

Tests of the cardiovascular system can be divided into those testing parasympathetic function (heart rate to deep breathing and Valsalva maneuver) and others testing sympathetic function (response of blood pressure to standing and to sustained hand grip). All the tests will be performed and analysed for variable scores as follows.

- a) Heart rate to deep breathing: baseline heart rate will be recorded. In sitting position, Patients will be asked to take 6 deep breaths per minute (with 5 s of inhalation and 5 s of exhalation per breath). A continuous ECG will be recorded, with marker to indicate the onset of each inspiration and expiration. Maximum and minimum R-R intervals will be measured during each breathing cycle and converted into beats per minute. The result will be expressed as mean of the difference between maximum and minimum heart rate for six measured cycles in beats per minute. Normal response is a difference of 18 beats per minute or more. The expiratory-inspiratory

ratio (E : I ratio), which is the ratio of the longest RR interval during expiration and the shortest RR interval during inspiration from 5 cycles, was also determined.

- b) Heart rate response to Valsalva maneuver: Subjects will be asked to blow into a mouthpiece connected to a mercury manometer and hold it at a pressure of 40 mmHg for 15 seconds, simultaneously monitored by the ECG. The ECG will be continued to be recorded 15 seconds after the release of pressure. The induced heart rate changes will be expressed as Valsalva ratio i.e ratio of maximum tachycardia (shortest R-R interval) during the manoeuvre to the maximum bradycardia (longest R-R interval) after the manoeuvre. Normal Valsalva ratio is 1.45 or more.
- c) Response of blood pressure to standing: The patient changes from the lying to the standing position while a continuous ECG (lead II) is recorded. The result is expressed as the ratio between the R-R interval at beat 30 and the R-R interval at beat 15 . A ratio of 1 .05 or higher is considered normal.
- d) Response of blood pressure to sustained hand grip: Using a hand grip dynamometer, a maximum voluntary contraction is first determined and then maintained at 30% of that maximum for as long as possible . The blood pressure is measured before and at 1-minute intervals during hand grip. The result is expressed as the difference between the highest diastolic pressure during hand grip and the diastolic pressure before hand grip . A rise of more than 10 mm Hg during hand grip is normally expected.

- **Respiratory system**

Baseline BP will be monitored, subject will be asked to hyperventilate for 30sec and simultaneously HR and blood pressure will be monitored. Initial drop in MAP followed by a reflex baroreceptor induced rise in MAP will be recorded. Inter individual variations will be noted.

- **Pupils**

The parasympathetic supply is concerned with constriction and the sympathetic with dilation. A normal pupillary light response needs both the autonomic arms intact. The Neurological Pupil index will be calculated by the Pupillometer. The QP parameters included Max (mm), Min (mm) and percentage of change ($CH = 100 \times [Max - Min]/Max$), constriction velocity (CV, mm/sec), latency of constriction (Lat, msec), dilation velocity (DV, mm/sec), and Neurological Pupil index (NPi). Variations with

each group will be analysed.

8.10 Data processing and analysis/statistical analysis: Data will be compiled in Excel sheet 2010. Mean, SD, ANOVA, Students paired and unpaired T test, Regression analysis will be analysed using SPSS software 23.

8.11 Are there any anticipated serious adverse events (SAE) or adverse events which may occur during course of your study. Minor discomfort expected due to tests, which will be well informed to all participants.

8.12 Does the study require any investigations or interventions to be conducted on patients If so, please describe briefly. Bloodpressure, Heart rate, ECG, War water hand immersion and use of pupilometer will be done.

8.13 If there are any investigations / Interventions necessary which have to be conducted for completion of your study, in such situation who will bear the cost of the investigations. Application for university grant in process. Or the student and guide will share the expense.

8.14 Budget analysis: Example given below

BUDGET

INCOME DETAILS	ACTUAL	BUDGETED
EXPENSE DETAILS	ACTUAL	BUDGETED
		15,000/-

8.15 Data analysis table: Example given below

SINo	Independent variable 1	Independent variable 2	Value obtained
1.	Classical	Autonomic function test for Skin, CVS, RS, Pupil	
2.	Jazz	Autonomic function test for Skin, CVS, RS, Pupil	
3.	Hiphop	Autonomic function test for Skin, CVS, RS, Pupil	
4.	Pop	Autonomic function test for Skin, CVS, RS, Pupil	

	5.	Rock	Autonomic function test for Skin, CVS, RS, Pupil

INFORMED CONSENT FORM

“Influence of different music genres on autonomic system functionality regulating various systemic physiological functions”

Name of Student/Principal Investigator: Kshitiz Chopra

Name of Guide/Co Investigators: Dr Shantala Shripad Herlekar

You will be given a copy of the full Informed Consent Form

Introduction:

I, Mr. Kshitiz chopra, am working on a project for STS-ICMR 2023. We are researching the Influence of different music genres on autonomic system functionality regulating various systemic physiological functions. I will provide you with the information related to our study and will invite you to be a part of it. You can talk to anyone you feel comfortable with about the research and decide about joining in. There may be some words that you may not understand. Please ask me to stop as we go through the information and I will take time to explain. If you have questions later, you can ask them to me, the study doctor, or the staff. Your participation in the study would help in better understanding of aspects of the Influence of different music genres on autonomic system functionality regulating various systemic physiological functions

As music listening is a popular activity of daily life, it is of utmost importance to study the effects of music listening on psychobiological stress in everyday, daily-life settings. Music is widely used to enhance well-being, reduce stress, and distract patients from unpleasant symptoms. In this study, we aim to find how listening to music affects our psychobiological behavior

Our study will involve the following things for you to follow;

Explanation of procedure:

(After obtaining institutional ethical clearance and written informed consent, adolescent in the age group of 18-25yrs, belonging to the student community of our college will be enrolled in our study. Students with a history of hearing impairments, history of drug abuse, smokers,

alcoholics, and suffering from cognitive disorders were excluded. 6 students with 3 girls and 3 boys will be part of 1 group. Such 5 groups will be part of 5 groups with different music genres. Following will be the 5 genres of music used, the music chosen will be instrumental in all genres.

- The total duration of the study is 2 months. It's a Cross-sectional interventional trial, by Simple random sampling. Adolescents in the age group of 18-25 years, belonging to the student community of our college will be enrolled in our study.

- Students with a history of hearing impairments, history of drug abuse, smokers, alcoholics, suffering from cognitive disorders, GI disturbances, skin complaints requiring rigorous treatment, Respiratory infections, and refractive errors will be excluded.

- 6 students with 3 girls and 3 boys will be part of 1 group. Such 5 groups will be part of 5 groups with different music genres. Following will be the 5 genres of music used, the music chosen will be instrumental in all genres.

Group 1: Classical – Classical instrumental flute music (Raga Malkauns)

- Group 2: Jazz – Trinity Snarky Puppy.
- Group 3: Hip-hop - “KARMA III” Hip Hop Instrumental Beat.
- Group 4: Pop – Instrumental pop music by Sonu Nigam
- Group 5: Rock - Nirvana, AC/DC, Deep Purple, Metallica Heavy Metal Hard Rock Music Instrumental 80's & 90's

- Skin:

The skin area over the right forearm will be manually dried and completely covered with an indicator dye. The color change of the used indicator marks the appearance of sweat droplets on the skin. The core temperature will be raised by 1 °C by immersion of the hand in hot water.

- Cardiovascular system:

Tests of the cardiovascular system can be divided into those testing parasympathetic and others testing sympathetic function.

- a. Heart rate to deep breathing: In sitting position, Patients will be asked to take 6 deep breaths per minute (with 5 s of inhalation and 5 s of exhalation per breath). A continuous ECG will be recorded, with marker to indicate the onset of each inspiration and expiration. Maximum and minimum R-R intervals will be measured during each breathing cycle and converted into beats per minute

- b. Heart rate response to Valsalva maneuver: Subjects will be asked to blow into a mouthpiece connected to a mercury manometer and hold it at a pressure of 40 mmHg for 15 seconds, simultaneously monitored by the ECG. The ECG will be continued to be recorded 15 seconds after the release of pressure
- c. Response of blood pressure to standing: The patient changes from the lying to the standing position while a continuous ECG (lead II) is recorded.
- d. Response of blood pressure to sustained hand grip: Using a hand grip dynamometer, a maximum voluntary contraction is first determined and then maintained at 30% of that maximum for as long as possible . The blood pressure is measured before and at 1- minute intervals during hand grip.

- Respiratory system:

Baseline BP will be monitored, subject will be asked to hyperventilate for 30sec and simultaneously HR and blood pressure will be monitored

- Pupils:

A normal pupillary light response needs both the autonomic arms intact. The Neurological Pupil index will be calculated by the Pupillometer

Participation in this study is voluntary You will be free to decide whether to participate in this study or continue participation once enrolled. In case you decide to withdraw your participation, you are free to do so. However, please convey the decision to the principal investigator.

The information that we collect from this research project will be kept confidential. Information about you that will be collected during the research will be put away and no one but the researchers will be able to see it. Any information about you will have a number on it instead of your name. Only the researchers will know what your number is and we will lock that information up with a lock and key. It will not be shared with or given to anyone.

Additional benefits: your participation in our research will help us in understanding the topic better. The investigation charges for research will be provided by the researchers. This study will be conducted during duty hours. Allocation of extra leaves, exemptions from duty, or any kind of financial assistance will not be a part of this study or the responsibility of the involved researchers.

You do not have to take part in this research if you do not wish to do so. You may also stop participating in the research at any time you choose. It is your choice and all of your rights will still be respected.

There are no risks involved in participating in this study. The Study Design is a Cross-sectional interventional trial and the Sampling technique by Simple random sampling.

Financial incentives: You will not receive any payment for participating in this study. The cost of the investigations. Application for university grant in process. Or the student and guide will share the expense.

Authorization for publication of aggregated data: Results obtained after processing of the aggregated data will be published for scientific purposes and or presented to scientific groups. However, your identity will never be revealed.

In case of any questions concerning this study, you are free to contact:

Details of investigators/institute:

Kshitiz Chopra; Ph: 7440447911; email: choprakshitiz0@gmail.com

Dr.Shantala.S.Herlekar; Ph+91 99002 60310; Email: shantala.herlekar@gmail.com

If you have any question or complaints with regard to your right as study participant you may contact Dr Harsha Hegde, Chairperson, Ethical committee of JNMC, 0831-2473777 Extension 4052.

Legal rights: By signing this consent form, we are not waving any of your legal rights

Financial incentives: You will not receive any payment for participating in this study.

CONSENT STATEMENT

I am making a voluntary decision to participate in the study “Influence of different music genres on autonomic system functionality regulating various systemic physiological functions.”. My signature below indicates that I have decided to participate and I have read the information provided above or the information provided above has been read to me in the language that I understand best. I was given the opportunity to ask questions and that they have been answered to my satisfaction.

Name of the participant:

Signature or left thumb impression of the participant:

Name of the witness:

Signature or left thumb impression of the witness:

Name of the investigator:

Signature of the investigator:

STANDARD PROTOCOL FOR INFORMED CONSENT (look for ICMR Guidelines)

1. Checklist of informed consent.

1.1 Essential Elements:

- i) Statement that the study involves research and explanation of the purpose of the research
- ii) Expected duration of the participation of subject.
- iii) Description of the procedures to be followed, including all invasive procedures.
- iv) Description of any reasonably foreseeable risks or discomforts to the Subject.
- v) Description of any benefits to the Subject or others reasonably expected from research. If no benefit is expected Subject should be made aware of this.
- vi) Disclosure of specific appropriate alternative procedures or therapies available to the Subject.
- vii) Statement describing the extent to which confidentiality of records identifying the Subject will be maintained and who will have access to Subject's medical records.
- viii) Trial treatment schedule and the probability for random assignment to each treatment (for randomized trials).
- ix) Statement describing the financial compensation and the medical management as under:
 - a) In case of an injury occurring to the subject during the clinical trial, free medical management shall be given as long as required or till such time it is established that the injury is not related to the clinical trial, whichever is earlier.
 - b) In the event of a trial related injury or death, the sponsor or his representative or the investigator or center, as the case may be, in accordance with the rule 39, as the case may be, shall provide financial compensation for the injury or death.
- x) An explanation about whom to contact for trial related queries, rights of Subjects and in the event of any injury.
- xi) The anticipated prorated payment, if any, to the subject for participating in the trial
- xii) Responsibilities of subject on participation in the trial
- xiii) Statement that participation is voluntary, that the subject can withdraw from the study at any time and that refusal to participate will not involve any penalty or loss of benefits to which the subject is otherwise entitled.
- xiv) Statement that there is a possibility of failure of investigational product to provide intended therapeutic effect
- xv) Statement that in the case of placebo-controlled trial, the placebo administered to the subjects shall not have any therapeutic effect.
- xvi) Any other pertinent information.

1.2 Additional elements, which may be required:

- i) Statement of foreseeable circumstances under which the participation of the subject may be terminated by the Investigator without his or her consent.
- ii) Additional costs to the subject that may result from participation in the study.
- iii) The consequences of a Subject's decision to withdraw from the research and procedures for orderly termination of participation by Subject.
- iv) Statement that the Subject or Subject's representative will be notified in a timely manner if significant new findings develop during the course of the research which may affect the Subject's willingness to continue participation will be provided.
- v) A statement that the particular treatment or procedure may involve risks to the Subject (or to the embryo or foetus, if the Subject is or may become pregnant), which are currently unforeseeable.
- vi) Approximate number of Subjects enrolled in the study.

CONSIDERATIONS FOR ASSENT (look for ICMR Guidelines)

There is no need to document assent for children below 7 years of age.

- For children between 7 and 12 years verbal/oral assent must be obtained in the presence of the parents/LAR and should be recorded.

For children between 12 and 18 years, a written assent must be obtained. This assent form also has to be also signed by the parents/_AR.

- Adolescents may have the capacity to give consent like adults. However, as they have not attained the legal age to provide consent, it is termed as assent and the consent of the parent/LAR should be obtained.

If the latter will affect the validity of the study, waiver of consent from the relevant adult should be taken and recorded with approval of EC

- Content of the assent form has to be in accordance with the developmental level and maturity of the children

- The language must be consistent with the cognitive, social and emotional status of the child and be simple and age appropriate

Verbal/Oral consent:
Verbal assent from minor (7-12 yrs) along with parental consent
Witnessed consent:
Written assent from minor (13-18 yrs) along with parental consent

FOLLOWING ARE SOME EXAMPLES OF VULNERABLE POPULATIONS OR GROUPS:

- economically and socially disadvantaged (unemployed individuals, orphans, abandoned individuals, persons below the poverty line, ethnic minorities, sexual minorities – lesbian/ gay/bisexual and transgender (LGBT), etc.);
- unduly influenced either by the expectation of benefits or fear of retaliation in case of refusal to participate which may lead them to give consent;
- children (up to 18 years);
- women in special situations (pregnant or lactating women, or those who have poor decision-making powers/poor access to healthcare);
- tribals and marginalized communities;
- refugees, migrants, homeless, persons or populations in conflict zones, riot areas or disaster situations;
- afflicted with mental illness and cognitively impaired individuals, differently abled –mentally and physically disabled;
- terminally ill or are in search of new interventions having exhausted all therapies;
- suffering from stigmatizing or rare diseases; or
- have diminished autonomy due to dependency or being under a hierarchical system (students, employees, subordinates, defence services personnel, healthcare workers, institutionalized individuals, under trials and prisoners).

DUTIES OF RESEARCHER (look for ICMR Guidelines)

- Recognize the vulnerability of the participant and ensure additional safeguards are in place for their protection.
- Justify inclusion/exclusion of vulnerable populations in the study.
- COI issues must be addressed.
- Have well defined procedures (SOPs) to ensure a balanced benefit-risk ratio.
- Ensure that prospective participants are competent to give informed consent.
- Take consent of the LAR when a prospective participant lacks the capacity to consent.
- Respect dissent from the participant.
- Seek permission of the appropriate authorities where relevant, such as for institutionalized individuals, tribal communities, etc.
- Research should be conducted within the purview of existing relevant guidelines/regulations.

6.	Title of the proposed research project:	

	The influence of sleep deprivation on semantic encoding and retrieval memory tasks
7.	<p>7.1 Introduction and Need for the study:</p> <p>Sleep after learning stabilizes and integrates memories for long term storage (1) while sleep prior to learning prepares the brain to encode new information (2) However, many adolescents obtain insufficient sleep, with 68% of teenagers in the US reporting sleep below the recommended 8–10 h each night (3,4) Actigraphically assessed sleep length has been consistently shown to dip below 6 h on weekday nights for adolescents in East Asia.(5,6) Chronic sleep restriction is associated with poorer academic performance(7) and a reduced capacity to encode new information.(6) Delaying school start times (8) and setting limits on bedtime (9,10) can improve adolescent sleep, but implementing these will entail significant effort and take time to employ effectively. In the interim, it remains an open challenge to improve learning given the restricted sleep adolescents currently obtain. Daytime naps consistently enhance memory in laboratory studies involving children (11–13) and adults.(14–18) Recently these findings have been translated to classroom learning by examining the utility of napping using educationally realistic learning materials. When learning detailed facts about ecology, a midafternoon nap enhanced memory to a similar extent as when that time was spent cramming.(19) A separate study found that a 2 h nap opportunity after a lecture was associated with better test performance in adolescents when compared to those who attended regular classes,(20) while a third study found a similar advantage when weekly lessons were followed by naps of longer than 30 min.(21) These findings suggest that it might be preferable to split available sleep time between a nocturnal bout and a daytime nap. Critically however, prior experimental research exploring the memory benefits of napping has only examined napping as a supplement to a fixed amount of nocturnal sleep.(11–15),(17–19) As such, nap conditions were associated with more total sleep in the 24 h period prior to cognitive tests compared to wake conditions that did not include a nap. Enhanced post-nap cognition could therefore be a function of total sleep obtained, rather than the nap per se. Determining if naps can benefit learning and memory when total sleep duration is held constant is crucial, as it could inform whether educational institutions should make the considerable practical adjustments that would facilitate napping in schools, or whether alternate solutions that focus on nocturnal sleep would provide similar benefits.</p> <p>It remains to be determined how long-term memory is affected when learning takes place under a similar split sleep schedule. To address these gaps in our knowledge, we compared long term memory in adolescents who learned across two simulated weeks of restricted sleep in a naturalistic school setting, where sleep opportunities on each day were either split into 5 h nocturnal sleep and a 1.5 h daytime nap, or 6.5 h of continuous nocturnal sleep.</p> <p>7.2 Objective of the study</p>

Primary-To identify the effect of acute sleep deprivation on memory encoding, consolidation and retrieving .

Secondary-To compare memory encoding, consolidation and retrieval between sleep deprived and non sleep deprived students.

Primary Outcomes:

- Change in the level of subjective sleepiness assessed with the Karolinska Sleepiness Scale from morning to afternoon and then evening from baseline days to the first and second cycles of sleep restriction and recovery [Time Frame: 3 times daily (10:00, 16:15, and 20:00) for 15 days]
Score on the Karolinska Sleepiness Scale (1-9 points).
- Change in positive mood assessed with the Positive and Negative Affect Scale (PANAS) from morning to afternoon and then evening from baseline days to the first and second cycles of sleep restriction and recovery [Time Frame: 3 times daily (10:00, 16:15, and 20:00) for 15 days]
Total score on the positive subscale of the PANAS.
- Change in negative mood assessed with the Positive and Negative Affect Scale (PANAS) from baseline first and after sleep restriction [Time Frame: 3 times daily (10:00, 16:15, and 20:00) for 15 days]
Total score on the negative subscale of the PANAS.
- Effect of sleep restriction on learning of novel material (about different animal species) across separate sessions [Time Frame: Single session during the 15-day protocol, after recovery night 2 (first recovery period)]
Memory score on test of learned material.
- Effect of sleep restriction on problem-solving [Time Frame: Single session during the 15-day protocol, after sleep restriction night 5 (first sleep restriction period)]
Number of correctly solved equations in matchstick arithmetic task

- Effect of sleep restriction on picture encoding [Time Frame: Single session during the 15-day protocol, after recovery night 2 (second recovery period)]
Memory score of correctly remembered encoded pictures of non-famous people, landscapes, scenes and objects
- Effect of sleep restriction on effort/temporal discounting [Time Frame: Three sessions during the 15-day protocol (after baseline night 1, after sleep restriction night 5 (first sleep restriction period) and after recovery night 2 (first recovery period))]
Choice preference (perform a longer duration task for a higher reward, or to take a break for a lower/no reward) in effort/temporal discounting task is measured

Secondary outcomes:

- Effect of verbal reward on procedural memory assessed using a finger tapping task [Time Frame: Two sessions during the 15-day protocol (before baseline night 1 and after baseline night 1)]
Accuracy of performance on the finger-tapping task.

7.3 Review of Literature

The effects of sleep deprivation on performance have been assessed both by examination of particular working situations and by measurement of task performance in healthy research subjects(1). The length of sleep deprivation is thought to be crucial with decrements in performance being more easily demonstrable after continuous sleep deprivation for 37 h. Performance on tasks which are interesting is less sensitive to sleep deprivation (1). A recent meta-analysis revealed that sleep deprivation does indeed adversely affect both accuracy and response time during working memory tasks, with effect sizes generally in the moderate range (2). Some of the most essential cognitive capacities to survival include the ability to acquire new information, commit such information to long-term storage, and effectively retrieve that information when needed – in other words, learning and memory. A large and growing literature suggests that sleep is critical to learning and memory, and when sleep is hindered, memory processing is correspondingly degraded (3). As we know, SD induces a wide-range of negative effects on cognitive functions (4,5). Previous studies have shown that memory and mood state are highly affected following SD (6,7,8).

8. Materials and Methods

8.1 Source of Data:

- MBBS student in JNMC.
- Physiology MSc student in JNMC.
- Allied student in JNMC

8.2 Study Design: Experimental trial

8.3 Study Period: 2 weeks

8.4 Sample Size:

The sample size is determined using this formula

$$N = (Z_{1-\alpha/2} + Z_{1-\beta})^2 (SD_1^2 + SD_2^2) / (x_1 - x_2)^2 * \text{attrition}$$

Sample size at 95% I and 95% power; 10% attrition

$$X_1 = 2.86$$

$$X_2 = 2.48$$

$$SD_1 = 0.33$$

$$SD_2 = 0.32$$

$$N = (1.96 + 1.64)^2 * (0.33^2 + 0.32^2) / (2.86 - 2.48)^2 * 1.20$$

$$N = 22.75$$

$$N = 23 \text{ per group}$$

2 groups sample size=46

8.5 Sampling technique: Simple random sampling

8.6 Inclusion Criteria:

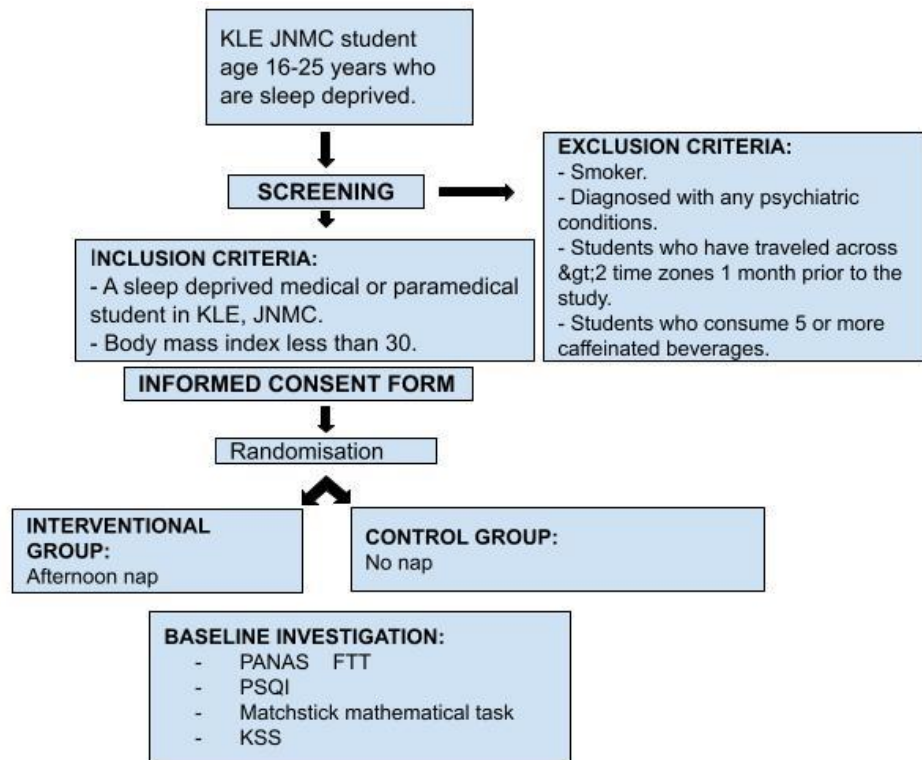

- A sleep deprived medical or paramedical student in KLE, JNMC.
- Body mass index not greater than 30

8.7 Exclusion Criteria:

- Habitual short sleepers (actigraphically assessed TIB < 6 h averaged across weekdays and weekends).
- Smoker.
- Diagnosed with any psychiatric conditions.
- Students who have traveled across >2 time zones 1 month prior to the study.

- Students who consume ≥ 5 caffeinated beverages per day.

8.8 Study protocol:

The study begins with 2 baseline nights of 9 h nocturnal sleep opportunity followed by the first school week period, during which one group will be provided with a 6.5 h nocturnal sleep opportunity (00:15–06:45) and the other group 5 h nocturnal sleep opportunity (01:00–06:00) with a 1.5 h afternoon nap (14:00–15:30). This will be followed by a “weekend” recovery period of 9 h nocturnal sleep opportunity. Picture encoding began at the end of the first manipulation period and will be tested after two nights of recovery. Learning of factual knowledge will be in the morning and afternoon on each weekday of the second manipulation period and tested after one night of weekend recovery sleep.

Before participants join the study, their health condition will be evaluated by answers to items in a general health questionnaire giving information about somatic and psychiatric disorders and use of substances that may have effects on sleep.

8.9 Data collection procedure:

60 students from JNMC will be selected to undergo the experiment. Participants will be screened for known health conditions, sleep disorders, and had body mass index of ≤ 30 kg/m². Matching students into 2 groups: split sleep (n = 15) and continuous sleep (n = 15).

Picture-encoding task

Stimuli consists of 240 images depicting a variety of landscapes and building types, of which half featured buildings while the other half did not. These were split into three sets of 80 images (40 buildings, 40 no buildings). Two sets were presented during both encoding and retrieval (160 old images), while one set was presented only at retrieval (80 new images). The use of each set during encoding and retrieval was counterbalanced across participants.

Encoding done in a single 15 min block. Participants will be instructed to look carefully at each image without being informed that their memory would be tested at a later date.

The 160 images will be presented in a randomized order. Each image will be presented for 2500 ms before a response screen will be displayed showing “(1) Building, (2) No building”. After participants respond with the corresponding keypress, an inter-trial interval (ITI) of 1000 ms elapsed before the start of the next trial. Retrieval will test the recognition of 160 old images randomly intermixed with 80 new images. Images will be presented above a five-point confidence scale: “(1) Definitely did not see, (2) Probably did not see, (3) Unsure, (4) Probably saw, (5) Definitely saw”. Participants will be asked to indicate whether they remembered each image from the previous session. The trial will be terminated following a response, or after a 5000 ms time limit had elapsed, and then followed by a 1000 ms ITI. (1) confidence ratings of 4 (probably saw) and 5 (definitely saw) to old images were classed as “hits”, (2) confidence ratings of 4 and 5 to new images were “false alarms”.

Factual knowledge task—encoding

Participants will be informed that all information they were about to learn would be tested. They were shown example test questions instructed to not discuss or peruse information about frogs/amphibians outside of the specified learning blocks.

Each day, participants learned 2 30 minute blocks in the morning (e.g., frogs and newts) separated by a 2 min break and 2 blocks containing different animal types in the afternoon (e.g., toads and salamanders). Participants learned the same species in the morning and afternoon on each of the 3 days of the experiment, but the order that they learned them was switched each day. For example, if they learned frogs and then newts on the first morning of the experiment, they learned newts followed by frogs on the second morning. The learning materials for each type of animal (e.g., newts) contained roughly 80 slides of factual information in the form of numbered points and images. The final slide of each block instructed participants to use the remaining time to recap the information.

When the 30 min of each block had elapsed, participants completed a Karolinska Sleepiness Scale (KSS) and were asked 3 questions to rate on a 7-point scale: “Was your attention focused on the task or something unrelated to the task? (1 = completely on task, 7 = completely off task)”, “How motivated were you to learn the information? (1 = completely motivated, 7 = completely unmotivated)”, and “How well do you feel you could learn the information? (1 = extremely well, 7 = extremely poorly)”. These are referred to as subjective “focus”, “motivation”, and “ability”, respectively. Scores were subsequently inverted for analysis so that higher values represent higher levels for each measure.

Factual knowledge task—retrieval

This involved two-alternative choice questions followed by a confidence rating (“certain”, “somewhat certain”, “guess”).

There were 360 questions (90 for each animal type) relating to materials encoded in the morning (180) and afternoon (180) and presented randomly within 6 blocks that were separated by 30s breaks. The foil was the answer to the same question for a different species.

Data processing and analysis/statistical analysis:

By using Statistical Package for Social Science (SPSS) 25.0 version, Separate 2 × 2 mixed ANOVA with the factors group (split sleep/continuous sleep) and time (morning, afternoon) will performed for each measure of the factual knowledge task (certain, somewhat certain, guess, and overall memory), as well as subjective measures during learning (KSS, focus, motivation, and ability) and PVT lapses. Independent and paired t-tests were used for sleep architecture, picture encoding metrics, and follow-up tests to ANOVA.

8.10 Does the study require any investigations or interventions to be conducted on patients or other humans or animals? If so, please describe briefly.

No

8.11 Budget analysis:

INCOME DETAILS	ACTUAL	BUDGETED
None		
EXPENSE DETAILS	ACTUAL	BUDGETED
		Rs. 300 (Printing)

8.12 Data analysis table:

Sl. No.	IP/OP No.	Independent variable 1	Independent variable	Dependent variable
1.		Split sleep	Continuous sleep	Picture encoding as well as encoding and retrieval of factual knowledge

MEMORY RETRIEVAL TASKS”

Name of Student/Principal Investigator: LINA SAMEER IBRAHIM HAJ ALTAYIB &
SUNAINA ANANTHA

Name of Guide/Co Investigators: DR. NIRMALA ANAND

Objectives:

Primary-To identify the effect of acute sleep deprivation on memory encoding, consolidation and retrieving .

Secondary-To compare memory encoding, consolidation and retrieval between sleep deprived and non sleep deprived students.

Primary Outcomes:

- Change in the level of subjective sleepiness assessed with the Karolinska Sleepiness Scale from morning to afternoon and then evening from baseline days to the first and second cycles of sleep restriction and recovery [Time Frame: 3 times daily (10:00, 16:15, and 20:00) for 15 days]
Score on the Karolinska Sleepiness Scale (1-9 points).
- Change in positive mood assessed with the Positive and Negative Affect Scale (PANAS) from morning to afternoon and then evening from baseline days to the first and second cycles of sleep restriction and recovery [Time Frame: 3 times daily (10:00, 16:15, and 20:00) for 15 days]
Total score on the positive subscale of the PANAS.
- Change in negative mood assessed with the Positive and Negative Affect Scale (PANAS) from baseline first and after sleep restriction [Time Frame: 3 times daily (10:00, 16:15, and 20:00) for 15 days]
Total score on the negative subscale of the PANAS.

- Effect of sleep restriction on learning of novel material (about different animal species) across separate sessions [Time Frame: Single session during the 15-day protocol, after recovery night 2 (first recovery period)]
Memory score on test of learned material.
- Effect of sleep restriction on problem-solving [Time Frame: Single session during the 15-day protocol, after sleep restriction night 5 (first sleep restriction period)]
Number of correctly solved equations in matchstick arithmetic task
- Effect of sleep restriction on picture encoding [Time Frame: Single session during the 15-day protocol, after recovery night 2 (second recovery period)]
Memory score of correctly remembered encoded pictures of non-famous people, landscapes, scenes and objects
- Effect of sleep restriction on effort/temporal discounting [Time Frame: Three sessions during the 15-day protocol (after baseline night 1, after sleep restriction night 5 (first sleep restriction period) and after recovery night 2 (first recovery period))]
Choice preference (perform a longer duration task for a higher reward, or to take a break for a lower/no reward) in effort/temporal discounting task is measured

Secondary outcomes:

- Effect of verbal reward on procedural memory assessed using a finger tapping task [Time Frame: Two sessions during the 15-day protocol (before baseline night 1 and after baseline night 1)]
Accuracy of performance on the finger-tapping task.

Introduction:

Sleep after learning stabilizes and integrates memories for long term storage (1) while sleep prior to learning prepares the brain to encode new information (2) However, many adolescents obtain insufficient sleep, with 68% of teenagers in the US reporting sleep below the recommended 8–10 h each night (3,4) Actigraphically assessed sleep length has been consistently shown to dip below 6 h on weekday nights for adolescents in East Asia.(5,6) Chronic sleep restriction is associated with poorer academic performance(7) and a reduced capacity to encode new information.(6) Delaying school start times (8) and setting limits on bedtime (9,10) can improve adolescent sleep, but implementing these will entail significant

effort and take time to employ effectively. In the interim, it remains an open challenge to improve learning given the restricted sleep adolescents currently obtain. Daytime naps consistently enhance memory in laboratory studies involving children (11–13) and adults.(14–18) Recently these findings have been translated to classroom learning by examining the utility of napping using educationally realistic learning materials. When learning detailed facts about ecology, a midafternoon nap enhanced memory to a similar extent as when that time was spent cramming.(19) A separate study found that a 2 h nap opportunity after a lecture was associated with better test performance in adolescents when compared to those who attended regular classes,(20) while a third study found a similar advantage when weekly lessons were followed by naps of longer than 30 min.(21) These findings suggest that it might be preferable to split available sleep time between a nocturnal bout and a daytime nap. Critically however, prior experimental research exploring the memory benefits of napping has only examined napping as a supplement to a fixed amount of nocturnal sleep.(11–15),(17–19) As such, nap conditions were associated with more total sleep in the 24 h period prior to cognitive tests compared to wake conditions that did not include a nap. Enhanced post-nap cognition could therefore be a function of total sleep obtained, rather than the nap per se. Determining if naps can benefit learning and memory when total sleep duration is held constant is crucial, as it could inform whether educational institutions should make the considerable practical adjustments that would facilitate napping in schools, or whether alternate solutions that focus on nocturnal sleep would provide similar benefits.

It remains to be determined how long-term memory is affected when learning takes place under a similar split sleep schedule. To address these gaps in our knowledge, we compared long term memory in adolescents who learned across two simulated weeks of restricted sleep in a naturalistic school setting, where sleep opportunities on each day were either split into 5 h nocturnal sleep and a 1.5 h daytime nap, or 6.5 h of continuous nocturnal sleep

Explanation of procedure:

The study begins with 2 baseline nights of 9 h nocturnal sleep opportunity followed by the first school week period, during which one group will be provided with a 6.5 h nocturnal sleep opportunity (00:15–06:45) and the other group 5 h nocturnal sleep opportunity (01:00–06:00) with a 1.5 h afternoon nap (14:00–15:30). This will be followed by a “weekend” recovery period of 9 h nocturnal sleep opportunity. Picture encoding began at the end of the first manipulation period and will be tested after two nights of recovery. Learning of factual knowledge will be in the morning and afternoon on each weekday of the second manipulation period and tested after one night of weekend recovery sleep.

Before participants join the study, their health condition will be evaluated by answers to items in a general health questionnaire giving information about somatic and psychiatric disorders and use of substances that may have effects on sleep.

60 students from JNMC will be selected to undergo the experiment. Participants will be screened for known health conditions, sleep disorders, and had body mass index of ≤ 30 kg/m². Matching students into 2 groups: split sleep (n = 15) and continuous sleep (n = 15).

Picture-encoding task

Stimuli consists of 240 images depicting a variety of landscapes and building types, of which half featured buildings while the other half did not. These were split into three sets of 80 images (40 buildings, 40 no buildings). Two sets were presented during both encoding and retrieval (160 old images), while one set was presented only at retrieval (80 new images). The use of each set during encoding and retrieval was counterbalanced across participants.

Encoding done in a single 15 min block. Participants will be instructed to look carefully at each image without being informed that their memory would be tested at a later date.

The 160 images will be presented in a randomized order. Each image will be presented for 2500 ms before a response screen will be displayed showing “(1) Building, (2) No building”. After participants respond with the corresponding keypress, an inter-trial interval (ITI) of 1000 ms elapsed before the start of the next trial. Retrieval will test the recognition of 160 old images randomly intermixed with 80 new images. Images will be presented above a five-point confidence scale: “(1) Definitely did not see, (2) Probably did not see, (3) Unsure, (4) Probably saw, (5) Definitely saw”. Participants will be asked to indicate whether they remembered each image from the previous session. The trial will be terminated following a response, or after a 5000 ms time limit had elapsed, and then followed by a 1000 ms ITI. (1) confidence ratings of 4 (probably saw) and 5 (definitely saw) to old images were classed as “hits”, (2) confidence ratings of 4 and 5 to new images were “false alarms”.

Factual knowledge task—encoding

Participants will be informed that all information they were about to learn would be tested. They were shown example test questions instructed to not discuss or peruse information about frogs/amphibians outside of the specified learning blocks.

Each day, participants learned 2 30 minute blocks in the morning (e.g., frogs and newts) separated by a 2 min break and 2 blocks containing different animal types in the afternoon (e.g., toads and salamanders). Participants learned the same species in the morning and afternoon on each of the 3 days of the experiment, but the order that they learned them was switched each day. For example, if they learned frogs and then newts on the first morning of the experiment, they learned newts followed by frogs on the second morning. The learning materials for each type of animal (e.g., newts) contained roughly 80 slides of factual information in the form of numbered points and images. The final slide of each block instructed participants to use the remaining time to recap the information.

When the 30 min of each block had elapsed, participants completed a Karolinska Sleepiness Scale (KSS) and were asked 3 questions to rate on a 7-point scale: “Was your attention focused on the task or something unrelated to the task? (1 = completely on task, 7 = completely off task)”, “How motivated were you to learn the information? (1 = completely motivated, 7 = completely unmotivated)”, and “How well do you feel you could learn the information? (1 = extremely well, 7 = extremely poorly)”. These are referred to as subjective

“focus”, “motivation”, and “ability”, respectively. Scores were subsequently inverted for analysis so that higher values represent higher levels for each measure.

Factual knowledge task—retrieval

This involved two-alternative choice questions followed by a confidence rating (“certain”, “somewhat certain”, “guess”).

There were 360 questions (90 for each animal type) relating to materials encoded in the morning (180) and afternoon (180) and presented randomly within 6 blocks that were separated by 30s breaks. The foil was the answer to the same question for a different species.

Withdrawal from participation in the study: Participation in this study is voluntary. You will be free to decide whether to participate in this study or continue participation once enrolled. In case you decide to withdraw your participation, you are free to do so. However, please convey the decision to the principal investigator.

Possible benefits from participating in the study: You will not get any benefits by participating in this study. The data gathered will help the population at large.

Possible risks from participating in the study: There are no risks involved in participating in this study.

Privacy and confidentiality: The information collected from you will be coded, to prevent any person from identifying you. Your identity will never be revealed. The data collected from you will be kept confidential and only processed or aggregated data will be used for publication.

Financial incentives: You will not receive any payment for participating in this study.

Authorization for publication of aggregated data: Results obtained after processing of the aggregated data will be published for scientific purposes and or presented to scientific groups. However, your identity will never be revealed.

Questions: In case of any questions with regard to this study, you are free to contact: “Sunaina Anantha, 7619580777, sunaina.ananth@gmail.com ” If you have any question or complaints with regard to your right as study participant you may contact Dr Harsha Hegde, Chairperson, Ethical committee of JNMC, 0831-2473777 Extension 4052.

Legal rights: By signing this consent form, we are not waiving any of your legal rights.

CONSENT STATEMENT

I am making a voluntary decision to participate in the study “THE INFLUENCE OF SLEEP DEPRIVATION OF SEMANTIC ENCODING AND MEMORY RETRIEVAL TASKS”. My signature below indicates that I have decided to participate and I have read the information provided above or the information provided above has been read to me in the language that I understand best. I was given the opportunity to ask questions and that they have been answered to my satisfaction.

Name of the participant:

Signature or left thumb impression of the participant:

Name of the witness:

Signature or left thumb impression of the witness:

Name of the investigator: LINA SAMEER IBRAHIM HAJ ALTAYIB & SUNAINA ANANTHA

GUIDELINES FOR PREPARING THESIS/RESEARCH PROTOCOL

Preparing the protocol is initial but an important step in the thesis or dissertation work. The following is intended to help you in preparing the protocol.

1. **TITLE OF THE TOPIC:**

The title should be as brief as possible but should carry as much information as required.

2. **BRIEF RESUME OF THE WORK:**

- a. Give a brief introduction to the work you intend doing by focusing on present literature on the subject, gaps in the knowledge, if any, and the reasons for undertaking the study. You may have to quote a few references or other studies (About 100-200 words of introduction)
- b. Give the objectives of the study. The objectives usually should not be more than 2 to 4 and should relate to the points or key questions raised in introduction (about 50-100 words for objectives).
- c. Review the literature and give 3-5 references pertaining to the subject and work already published. It should be related to the objectives of the study.

3. **MATERIAL AND METHODS: (About 100-150 words)**

Briefly explain the source from which you would collect data for the study. For example, in clinical settings, it may be patients in hospitals, or in community settings, or it may be households or it may be a laboratory-based study.

Describe the method of collection of data. For instance, it may be interview or study of records or by animal experiments or by performing tests or laboratory investigations, or even through some intervention. In case of human or animal study, mention the inclusion and exclusion criteria. If there are any ethical issue involved, mention them and state how you intend to overcome.

If you are taking a sample, mention the sampling procedure and sample size. Thus, it is important to mention the subjects of your study, parameters and the procedures.

4. **REFERENCES:**

Give about 3-5 references quoted in your introduction or those related to your study. Following are the guidelines given for writing references.

GUIDELINES FOR WRITING REFERENCES

The following table summarizes the components of a reference and how they should be typed. Later, a few examples are given for different types of references.

DIFFERENT COMPONENTS OF REFERENCE AND METHOD OF TYPING

Indentation	Overhanging first line flush with margin Second line indented five spaces.
Name order	Last name first (of first author when more than one author)
Placement	End of body of report-listed alphabetically by last name of first author
Punctuation	Author name, Title, Place of Publication: Publisher, State of publication.
Page reference	Total number of pages in book or in articles.

EXAMPLES OF QUOTING REFERENCES

1. Standard journal article

a) List the first six authors followed by et al.

Halpern SD, Ubel PA, Caplan AL. Solid-organ transplantation in HIV-infected patients. *N Engl J Med.* 2002;347:284-7.

b) More than six authors:

(ANNEX-10-01)

STANDARD PROTOCOL FOR INFORMED CONSENT

1. Checklist of informed consent documents for clinical trial subject-

1.1 Essential Elements:

- i)** Statement that the study involves research and explanation of the purpose of the research
- ii)** Expected duration of the participation of subject.
- iii)** Description of the procedures to be followed, including all invasive procedures.
- iv)** Description of any reasonably foreseeable risks or discomforts to the Subject.
- v)** Description of any benefits to the Subject or others reasonably expected from research. If no benefit is expected Subject should be made aware of this.
- vi)** Disclosure of specific appropriate alternative procedures or therapies available to the Subject.
- vii)** Statement describing the extent to which confidentiality of records identifying the Subject will be maintained and who will have access to Subject's medical records.
- viii)** Trial treatment schedule and the probability for random assignment to each treatment (for randomized trials).
- ix)** Statement describing the financial compensation and the medical management as under:
 - a)** In case of an injury occurring to the subject during the clinical trial, free medical management shall be given as long as required or till such time it is established that the injury is not related to the clinical trial, whichever is earlier.
 - b)** In the event of a trial related injury or death, the sponsor or his representative or the investigator or center, as the case may be, in accordance with the rule 39, as the case may be, shall provide financial compensation for the injury or death.
- x)** An explanation about whom to contact for trial related queries, rights of Subjects and in the event of any injury.
- xi)** The anticipated prorated payment, if any, to the subject for participating in the trial.
- xii)** Responsibilities of subject on participation in the trial.
- xiii)** Statement that participation is voluntary, that the subject can withdraw from the study at any time and that refusal to participate will not involve any penalty or loss of benefits to which the subject is otherwise entitled.
- xiv)** Statement that there is a possibility of failure of investigational product to provide intended therapeutic effect.
- xv)** Statement that in the case of placebo-controlled trial, the placebo administered to the subjects shall not have any therapeutic effect.
- xvi)** Any other pertinent information.

1.2 Additional elements, which may be required:

- i)** Statement of foreseeable circumstances under which the participation of the subject may be terminated by the Investigator without his or her consent.
- ii)** Additional costs to the subject that may result from participation in the study.
- iii)** The consequences of a Subject's decision to withdraw from the

research and procedures for orderly termination of participation by Subject.

- iv)** Statement that the Subject or Subject's representative will be notified in a timely manner if significant new findings develop during the course of the research which may affect the Subject's willingness to continue participation will be provided.
- v)** A statement that the particular treatment or procedure may involve risks to the Subject (or to the embryo or foetus, if the Subject is or may become pregnant), which are currently unforeseeable.
- vi)** Approximate number of Subjects enrolled in the study.

6.	Title of the proposed research project: “THE MAASTRICHT ACUTE STRESS TEST (MAST): PHYSIOLOGICAL AND SUBJECTIVE RESPONSES IN ANTICIPATION, STRESS AND POST-STRESS PHASE.”	
7.	7.1 Introduction and Need for the study: The human stress response plays a vital adaptive role in daily life, serving to either benefit or produce maladaptive outcomes for the individual. This response primarily encompasses physiology, perception, emotion, and behavior, which collectively interact to shape how individuals cope with and react to stressors (1). Acute stress activates two axes— the sympatho-adrenal-medullary (SAM) axis and the hypothalamic-pituitary-adrenal (HPA) axis. The former gives rise to the fight or flight response, which in turn directly affects arousal, alertness, blood pressure, heart rate, pulse rate, cardiac output, respiratory rate and salivation, while the latter has a role in release of glucocorticoids (i.e. cortisol) (1) (3). These axes are	

mainly activated by physical stressors (pain, temperature) while psychosocial stressors are processed via the prefrontal cortex and the limbic system, but also affect these axes (1) (2).

The Maastricht Acute Stress Test (MAST) employs a combination of physical and psychological stress via the well-known Cold Pressor Test (CPT) and the Trier Social Stress Test (TSST) respectively. Both types of stress show variations in response in different individuals, especially when anticipatory stress is taken into consideration. These tests are designed to mimic real-life situations of acute stress (public speaking, singing) (1) (4). Emotional stress via the International Affective Picture System (IAPS) can be scored by the Self-Assessment Manikin (SAM).

The target populations of this study are the competitive athletes compared to the non-athletic population. This is one of very few attempts made to assess the effect of MAST on such a population. The MAST allows researchers to induce acute stress in a controlled setting and by using a consistent pattern of stressors across participants, it ensures that the stress response is comparable and can be studied systematically. Its standardized nature makes it highly reproducible, allowing researchers to replicate the stress induction process in different studies and settings, including the athletic population. This could enable researchers to study differences in stress reactivity in such people and can help gain insights on how to manage the mental and emotional state of competitive athletes, especially when they are faced with failure or physical injuries. This way, coaches and sports psychologists can better understand the factors influencing resilience or vulnerability to stress, and train and guide such a population accordingly. It can also be used to study the stress response in clinical populations, such as individuals with anxiety, depression or post-traumatic stress disorder (PTSD). Researchers can use the MAST to assess the efficacy of stress-reducing interventions or therapeutic strategies. The MAST is not only a research tool but also a valuable teaching and training resource. It can be used to educate students, clinicians, and researchers about stress responses, stress assessment, and stress-related disorders.

This study aims to elicit robust stress reactions to study and quantify various aspects of the stress response, including physiological, psychological, and behavioural changes, in order to provide better mental, emotional and psychological care as healthcare providers, especially to the overlooked competitively athletic population.

7.2 Objective of the study

- 1. Primary Objectives:** To evaluate the physiological response to an acute psychological stressor using the MAST and an emotional stressor and compare the responses of competitively athletic individuals and non-athletic individuals.
- 2. Secondary Objectives:** To assess the subjective stress response by using the following paradigms:
 - i) State-Trait Anxiety Inventory
 - ii) Depression Anxiety Stress Scales

7.3 Review of Literature

Physical fitness has always been directly connected to athletic performance but the link between psychological well-being and athletic performance is also undeniable. Psychological stress can significantly impact an athlete's ability to perform at their best. Stress can manifest as anxiety, nervousness, or fear of failure, leading to a decline in focus, coordination, and decision-making abilities. ⁽⁷⁾ It can even contribute to physical fatigue and increased risk of injury. In competition anxiety, mainly state anxiety is affected but it later converts to trait anxiety. This could negatively affect the performance of the athlete. ⁽⁵⁾⁽⁶⁾ This is why trait dominance is used to develop personalized coping mechanisms. ⁽⁷⁾

To address this, two essential assessments have been incorporated into our research study: the Maastricht Acute Stress Test (MAST) and the International Affective Picture System (IAPS) test.

The Maastricht Acute Stress Test (MAST) combines physical and psychological stress by utilizing the well-known Cold Pressor Test (CPT) and the Trier Social Stress Test (TSST). Both types of stress produce diverse responses in various people, especially when anticipatory stress is included. These exercises are intended to simulate real-life stressful situations (public speaking, singing) ⁽¹⁾⁽⁴⁾. The Self-Assessment Manikin (SAM) can assess emotional stress using the International Affective Picture System (IAPS).

The MAST test helps us understand an athlete's level of stress resilience and reactivity by subjecting them to controlled stressors in a research setting. This is one of very few attempts made to assess the effect of MAST on the athletic population. This valuable insight allows us to tailor support systems and coping strategies to build mental toughness and confidence. It also provides a way to assess how athletes might perform under pressure during competitions.

On the other hand, the IAPS test enables us to gauge emotional responses to various stimuli. An athlete's control over their emotion can predict the successfulness of his/her performance. ⁽⁷⁾⁽⁸⁾ Understanding an athlete's emotional reactivity helps coaches design training sessions that consider their mental state, promoting a more positive and focused approach to preparation and competition.

By integrating these psychological assessments into coaching methodology, coaches and guides can equip our athletes with the tools to overcome stress and perform optimally. Mental training techniques, such as visualization, mindfulness, and goal-setting, will complement physical training, fostering a harmonious balance between body and mind. ⁽⁷⁾

8. Materials and Methods

8.1 Source of Data: Participants indulging in competitive cricket aged between 14-20 years.

8.2 Study Design: Experimental Study

8.3 Study Period: 3 months

8.4 Sample Size: Total of 60 participants with 30 in each group

Formula –

The sample size (n) is calculated according to the formula:

$$n = \frac{z^2 \cdot p \cdot (1-p) / e^2}{1 + (z^2 \cdot p \cdot (1-p) / (e^2 \cdot N))}$$

Where:

$z = 2.33$ for a confidence level $\alpha = 98\%$,

p = proportion (expressed as a decimal),

N = population size,

e = margin of error.

$z = 1.96$, $p = 0.95$, $N = 60$, $e = 0.046$

$$n \approx 26, 2n = 52$$

Anticipating 10% loss to follow up

$$2n \approx 60$$

$n = 30$ in each group

8.5 Sampling technique: Purposive Sampling

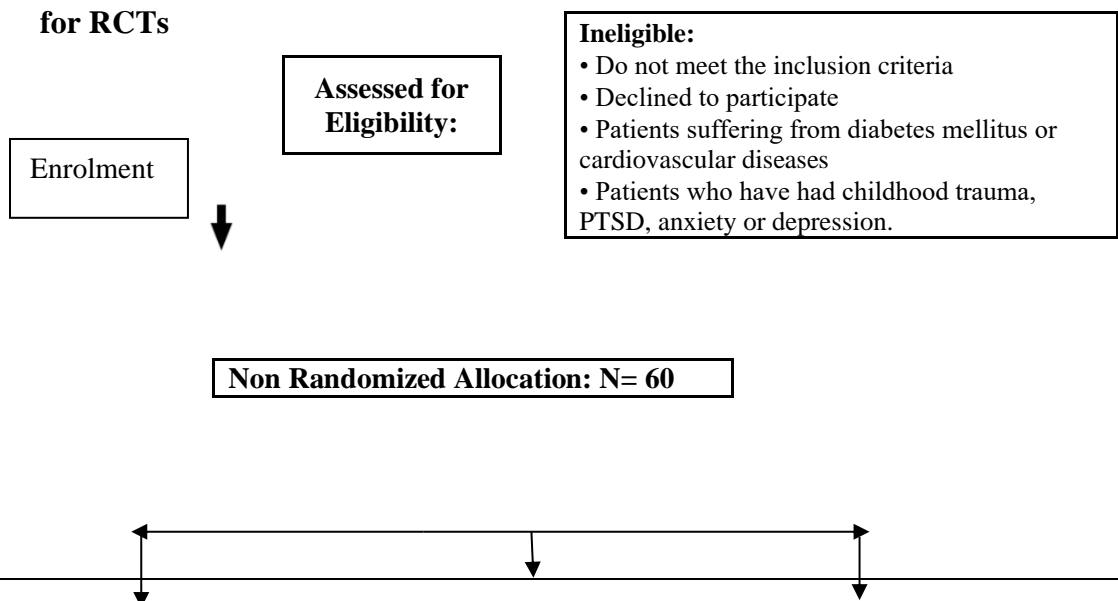

8.6 Inclusion Criteria:

- (a) Males aged between 14-20 years, indulging in competitive cricket for minimum 6 months.
- (b) Competitive athletes who are training for at least 3 days a week.

8.7 Exclusion Criteria:

- (a) Those who have a history of childhood trauma, PTSD or depression.
- (b) Those who suffer from diabetes mellitus and heart disease.

8.8 Study protocol: Consort flow chart for RCTs

Allotment

Experimental group-
Competitive athletes
(n=30)

Undergo MAST and
emotional stressor

Non-Experimental group
(n=30)- Sedentary

Undergo no-stress
placebo and emotional
stressor

8.9 Data collection procedure:

(I) Participants will be asked to arrive at 6.00 pm at the venue and the test will be started at sharp 7.00 pm to maintain a uniform hormonal circadian rhythm. They will be informed prior to the test that they should not consume alcohol/caffeine or smoke for 24 hours before the test, and no food or water should be consumed at least 30 minutes before the test. Participants will be asked to fill the voluntary written informed consent and the entire experimental protocol will be explained to them. Participants are asked to fill both STAI and DASS-21 questionnaires. Basal readings of blood pressure, heart rate, pulse rate, respiratory rate and cardiac output are taken.

(II) This study involves the formation of an experimental group who will undergo the MAST and a non-experimental group who will undergo a no-stress placebo version of the MAST with little temperature variation in CPT, simplified counting, and no performance evaluation.

(III) For the experimental group:

The MAST begins with a 5 min preparation phase to allow the participant to read the instructions for the upcoming task (on a PowerPoint presentation). The blood pressure, heart rate, pulse rate, respiratory rate and cardiac output are measured again in the anticipatory phase. In the following 10 min acute stress phase, physical stress (e.g., cold induced pain) is combined with unpredictability, uncontrollability, and social evaluation in a mental arithmetic task. Participants will be informed that there will be alternating trials of immersing their hand into ice-cold water (maintained at 2°C), and engaging in a mental arithmetic task (counting aloud backward from 2043 in steps of 17). They will be told that the duration of these trials will be randomly chosen by the computer to last between 45 and 90 s and to use their non-dominant hand. In between the hand immersion trials, participants will resume the counting task while they rest their arm on a towel beside the water bath. If they make a mistake in accuracy or do not give a response within 5 s, negative feedback will be given by the experimenter and the participant will have to start again at 2043. Participants will also be informed that they will be video and audio recorded so as to later analyze their facial expressions and tone. In reality, the duration of all trials will be pre-determined with the same protocol used for all participants. Five hand immersion trials (HI) will be alternated with four mental arithmetic trials (MA) in the following order and length,

HI (90 s), MA (45 s), HI (60s), MA (60s), HI (60s), MA (90s), HI (90s), MA (45s), HI (60 s).

Participants will be unaware of the number of trials and the total duration of the stress phase. At a particular time during the acute stress phase, the reading of salivary cortisol will be recorded.

After the MAST, the emotional stressor (International Affective Picture System with rating via Self-Assessment Manikin) will be given in a soundproof room with a laptop. The subject will be seated in a comfortable chair and the protocol will be explained to them. The laptop will show a PowerPoint presentation with 21 shuffled images of Paul Ekman's facial expressions for the seven basic emotions (happiness, anger, disgust, sadness, contempt, surprise and fear). First there will be a baseline period for 30s, where the subject will have to close their eyes while maintaining silence. Then a 2s warning will be given after which the image will be displayed for 6s. The subject will be asked to rate the picture according to the SAM (valence, arousal and dominance) in 15s. There will be a resting period for 30s before the next image in which the subject will again have to close their eyes and maintain silence. This will be repeated for all 21 images. During this procedure blood pressure, heart rate, pulse rate, respiratory rate and cardiac output will be measured.

For the non-experimental group:

Here the MAST will begin at the same time at the same venue. Basal readings and anticipatory phase readings of blood pressure, heart rate, pulse rate, respiratory rate and cardiac output will be taken. There will again be alternating trials of mental arithmetic and physical stress phases, but markedly less stressful than the experimental group. There will be a 5 degree change from normal body temperature in the water. Participants will be asked to do simplified upward consecutive counting from 1 to 25. Even if they answer incorrectly or cannot answer within 5 seconds, no negative feedback will be given by the experimenter. The same parameters along with salivary cortisol will be measured during the stressful phase as well. Following this, the emotional stressor is administered and once again these parameters will be measured.

(V) All participants will complete only the state questionnaire of the STAI again immediately after undergoing the MAST and the emotional stressor.

8.10 Data processing and analysis/statistical analysis:

a) Testing of the salivary cortisol content during the experiment, which is a biomarker for acute stress in both experimental and non-experimental groups.

Test used- Elecsys Cortisol II Assay

Range- 1.5-1750 nmol/L or 0.054-63.4 µg/dL

Sensitivity-

- Limit of Blank= 1.0 nmol/L (0.036 µg/dL)
- Limit of Detection= 1.5 nmol/L (0.054 µg/dL)
- Limit of Quantitation= 3.0 nmol/L (0.109 µg/dL)

b) Anticipatory and post-experiment testing of blood pressure, heart rate, pulse rate, respiratory rate and cardiac output.

c) State-Trait Anxiety Inventory—

It was developed by Charles D. Spielberger, Richard L. Gorsuch, and Robert E. Lushene in the late 1960s. The STAI consists of two separate scales, each comprising 20 items:

State Anxiety Scale (STAI-S):

The State Anxiety Scale assesses an individual's current, temporary emotional state of anxiety at a particular moment in time. It measures how a person feels "right now," reflecting their feelings of apprehension, tension, nervousness, and worry at the moment of completing the questionnaire. The responses are based on a 4-point Likert-type scale ranging from 1 (Not at all) to 4 (Very much so).

Trait Anxiety Scale (STAI-T):

The Trait Anxiety Scale assesses an individual's general propensity to experience anxiety as a stable personality trait over time. It measures how a person typically feels, regardless of the current situation, indicating their relatively stable and enduring anxiety levels. Like the State Anxiety Scale, responses are based on a 4-point Likert-type scale ranging from 1 (Almost never) to 4 (Almost always).

Scoring and Interpretation:

The total score for each scale (STAI-S and STAI-T) is calculated by summing the responses to the respective 20 items. Higher scores on the STAI-S indicate higher levels of current state anxiety, while higher scores on the STAI-T suggest a higher disposition towards experiencing trait anxiety.

d) Depression Anxiety Stress Scale 21

The Depression Anxiety Stress Scale 21 (DASS-21) is a widely used psychological self-assessment tool designed to measure the severity of symptoms related to depression, anxiety, and stress. It is a shorter version of the original DASS, which has 42 items, and was developed by researchers Lovibond and Lovibond in 1995.

The DASS-21 consists of three subscales, each comprising seven items, and is scored on a 4-point Likert-type scale.

Depression Scale:

The depression scale of DASS-21 assesses the presence and severity of symptoms related to depression. It includes items that measure low mood, lack of interest or pleasure in activities, and feelings of hopelessness or worthlessness, among others. Participants are asked to rate how much each statement applies to them over the past week, ranging from 0 (Did not apply to me at all) to 3 (Applied to me very much or most of the time).

Anxiety Scale:

The anxiety scale of DASS-21 assesses the presence and severity of symptoms related to anxiety. It includes items that measure feelings of nervousness, fear, restlessness, and other physical and psychological symptoms of anxiety. Participants are asked to rate how much each statement applies to them over the past week, using the same 4-point Likert scale.

Stress Scale:

The stress scale of DASS-21 assesses the presence and severity of symptoms related to stress. It includes items that measure feelings of tension, irritability, difficulty relaxing, and other stress-

related symptoms. Participants are asked to rate how much each statement applies to them over the past week, using the same 4-point Likert scale.

Scoring and Interpretation:

Each item in the DASS-21 is scored from 0 to 3, with higher scores indicating greater symptom severity. The scores from each subscale are summed to obtain a total score for depression, anxiety, and stress separately. The possible range of scores for each subscale is 0 to 21.

Interpretation of the scores is as follows:

0-4: Normal

5-6: Mild

7-10: Moderate

11-13: Severe

14+: Extremely severe

e) International Affective Picture System:

It is a standardized set of images that are widely used in research to elicit emotional responses from participants. These images represent various emotional categories, such as happiness, fear, sadness, disgust, and so on. Researchers use the IAPS to study emotional processing, emotional responses, and other related phenomena. Participants are typically shown these images and then asked to rate their emotional experiences in response to each image according to the Self-Assessment Manikin (SAM). It is a pictorial rating scale designed to measure subjective emotional experiences. Both the IAPS and SAM are developed by Dr. Richard J. Davidson and his colleagues at the Center for Investigating Healthy Minds.

The Self-Assessment Manikin typically consists of three pictorial scales, each representing a different dimension of emotional experience:

Affective Valence: This scale measures the pleasure or displeasure of the emotional experience. It ranges from a smiling, happy figure on one end to a frowning, unhappy figure on the other end.

Arousal: This scale assesses the level of physiological and psychological activation or arousal associated with the emotional experience. It ranges from a relaxed, calm figure on one end to an excited, highly aroused figure on the other end.

Dominance: This scale gauges the perceived level of control or dominance experienced during the emotional state. It ranges from a submissive, powerless figure on one end to a dominant, in-control figure on the other end.

Participants are asked to choose the manikin that best represents their emotional state in response to a given stimulus or situation.

Statistical Analysis:

(I) SPSS software version 25 will be used for data collection using Microsoft Excel sheet. Quantitative data will be analyzed for normality using Mean± SD.

(II) ANOVA Test:

For testing three or more independent variables.

(III) Shapiro-Wilks Tests of Normality:

For determining whether a dataset follows a normal distribution.

8.11 Are there any anticipated serious adverse events (SAE) or adverse events which may occur during course of your study?

No.

8.12 Does the study require any investigations or interventions to be conducted on patients? If so, please describe briefly.

No.

8.13 If there are any investigations / Interventions necessary which have to be conducted for completion of your study, in such situation who will bear the cost of the investigations?

For the collection and estimation of salivary cortisol the principal investigator will bear the cost of the investigations.

8.14 Budget analysis:

BUDGET

INCOME DETAILS	ACTUAL	BUDGETED
NONE		
EXPENSE DETAILS	ACTUAL	BUDGETED
		Rs. 240 (Printing) + Rs. 600 (Travel) + Rs. 10200 (Salivary Cortisol test) + Rs. 3000 (Saliva container)= Rs. 14040

8.15 Data analysis table:

SINo	IP/OP No	Independent variable1	Independent variable 2	Independent variable 3	Dependent variable
1.		Psychological Stress	Physical Stress	Emotional Stress	Athletic performance

INFORMED CONSENT FORM

“THE MAASTRICHT ACUTE STRESS TEST (MAST): PHYSIOLOGICAL AND SUBJECTIVE RESPONSES IN ANTICIPATION, STRESS AND POST-STRESS PHASE.”

Name of Student/Principal Investigator: MS. SUNAINA ANANTHA

Name of Guide/Co Investigators: DR. NIRMALA S ANAND

Introduction: The Maastricht Acute Stress Test will be done on competitively athletic cricket players to induce a combination of acute psychological and physical stress in order to assess the measurable effects of stress on the body. We will also be adding an emotional stressor to this study.

Explanation of procedure:

(I) Participants will be asked to arrive at 9.00 am at the venue and the test will be started at sharp 10.00 am to maintain a uniform hormonal circadian rhythm. They will be informed prior to the test that they should not consume alcohol/caffeine or smoke for 24 hours before the test, and no food should be consumed 30 minutes before the test. Participants will be asked to fill the voluntary written informed consent and the entire experimental protocol will be explained to them. Participants are asked to fill both STAI and DASS-21 questionnaires. Basal readings of blood pressure, heart rate, pulse rate, respiratory rate and cardiac output are taken.

(II) This study involves the formation of an experimental group who will undergo the MAST and a non-experimental group who will undergo a no-stress placebo version of the MAST with little temperature variation in CPT, simplified counting, and no performance evaluation.

(III) For the experimental group:

The MAST will begin with a 5 min preparation phase to allow the participant to read the instructions for the upcoming task (on a PowerPoint presentation). The blood pressure, heart rate, pulse rate, respiratory rate and cardiac output will be measured again in the anticipatory phase. In the following 10 min acute stress phase, physical stress (e.g., cold induced pain) will be combined with unpredictability, uncontrollability, and social evaluation in a mental arithmetic task. Participants will be informed that there will be alternating trials of immersing their hand into ice-cold water (maintained at 2°C), and engaging in a mental arithmetic task (counting aloud backward from 2043 in steps of 17). They will be told that the duration of these trials will be randomly chosen by the computer to last between 45 and 90 s and to use their non-dominant hand. In between the hand immersion trials, participants will resume the counting task while they rest their arm on a towel beside the water bath. If they make a mistake in accuracy or do not give a response within 5 s, negative feedback will be given by the experimenter and the participant will have to start again at 2043. Participants will also be informed that they will be video and audio recorded so as to later analyze their facial expressions and tone. In reality, the duration of all trials will be pre-determined with the same protocol used for all participants. Five hand immersion trials (HI) will be alternated with four mental arithmetic trials (MA) in the following order and length,

HI (90 s), MA (45 s), HI (60s), MA (60s), HI (60s), MA (90s), HI (90s), MA (45s), HI (60 s).

Participants will be unaware of the number of trials and the total duration of the stress phase. At a particular time during the acute stress phase, the reading of salivary cortisol will be recorded.

After the MAST, the emotional stressor (International Affective Picture System with rating via Self-Assessment Manikin) will be given in a soundproof room with a laptop. The subject will be seated in a comfortable chair and the protocol is explained to them. The laptop will show a PowerPoint presentation with 21 shuffled images of Paul Ekman's facial expressions for the seven basic emotions (happiness, anger, disgust, sadness, contempt, surprise and fear). First there will be a baseline period for 30s, where the subject will have to close their eyes while maintaining silence. Then a 2s warning will be given after which the image will be displayed for 6s. The subject will be asked to rate the picture according to the SAM (valence, arousal and dominance) in 15s. There will be a resting period for 30s before the next image in which the subject will again have to close their eyes and maintain silence. This will be repeated for all 21 images. During this procedure blood pressure, heart rate, pulse rate, respiratory rate and cardiac output will be measured.

For the non-experimental group:

Here the MAST will begin at the same time at the same venue. Basal readings and anticipatory phase readings of blood pressure, heart rate, pulse rate, respiratory rate and cardiac output will be taken. There will again be alternating trials of mental arithmetic and physical stress phases, but markedly less stressful than the experimental group. There will be a 5 degree change from normal body temperature in the water. Participants will be asked to do simplified upward consecutive counting from 1 to 25. Even if they answer incorrectly or cannot answer within 5 seconds, no negative feedback will be given by the experimenter. The same parameters will be measured during the stressful phase as well. Following this, the emotional stressor is administered and once again these parameters will be measured.

(V) All participants will complete only the state questionnaire of the STAI again immediately after undergoing the MAST and the emotional stressor.

Withdrawal from participation in the study: Participation in this study is voluntary. You will be free to decide whether to participate in this study or continue participation once enrolled. In case you decide to withdraw your participation, you are free to do so. However, please convey the decision to the principal investigator.

Possible benefits from participating in the study: You will not get any benefits by participating in this study. The data gathered will help population at large.

Possible risks from participating in the study: There are no risks involved in participating in this study.

Privacy and confidentiality: The information collected from you will be coded, to prevent any person to identify you. Your identity will never be revealed. The data collected from you will be kept confidential and only processed or aggregated data will be used for publication.

Financial incentives: You will not receive any payment for participating in this study.

Cost of investigations done during the course of study will be paid by the **principal investigator / Participant.**

Authorization for publication of aggregated data: Results obtained after processing of the aggregated data will be published for scientific purpose and or presented to scientific groups. However, your identity will never be revealed.

Questions: In case of any questions with regard to this study, you are free to contact: “**Ms. Sunaina Anantha, 7619580777, sunaina.ananth@gmail.com**” If you have any question or complaints with regard to your right as study participant you may contact Dr Harsha Hegde, Chairperson, Ethical committee of JNMC, 0831-2473777 Extension 4052.

Legal rights: By signing this consent form, we are not waiving any of your legal rights.

CONSENT STATEMENT

I am making a voluntary decision to participate in the study “THE MAASTRICHT ACUTE STRESS TEST (MAST): PHYSIOLOGICAL AND SUBJECTIVE RESPONSES IN ANTICIPATION, STRESS AND POST-STRESS PHASE.” My signature below indicates that I have decided to participate and I have read the information provided above or the information provided above has been read to me in the language that I understand best. I was given the opportunity to ask questions and that they have been answered to my satisfaction.

Name of the participant:

Signature or left thumb impression of the participant:

Name of the witness:

Signature or left thumb impression of the witness:

Name of the investigator: Ms. Sunaina Anantha

Signature of the investigator:

STANDARD PROTOCOL FOR INFORMED CONSENT (look for ICMR Guidelines)

1. Checklist of informed consent.

1.1 Essential Elements:

- i) Statement that the study involves research and explanation of the purpose of the research
- ii) Expected duration of the participation of subject.
- iii) Description of the procedures to be followed, including all invasive procedures.
- iv) Description of any reasonably foreseeable risks or discomforts to the Subject.
- v) Description of any benefits to the Subject or others reasonably expected from research. If no benefit is expected Subject should be made aware of this.
- vi) Disclosure of specific appropriate alternative procedures or therapies available to the Subject.
- vii) Statement describing the extent to which confidentiality of records identifying the Subject will be maintained and who will have access to Subject's medical records.
- viii) Trial treatment schedule and the probability for random assignment to each treatment (for randomized trials).
- ix) Statement describing the financial compensation and the medical management as under:
 - a) In case of an injury occurring to the subject during the clinical trial, free medical management shall be given as long as required or till such time it is established that the injury is not related to the clinical trial, whichever is earlier.
 - b) In the event of a trial related injury or death, the sponsor or his representative or the investigator or center, as the case may be, in accordance with the rule 39, as the case may be, shall provide financial compensation for the injury or death.
- x) An explanation about whom to contact for trial related queries, rights of Subjects and in the event of any injury.
- xi) The anticipated prorated payment, if any, to the subject for participating in the trial
- xii) Responsibilities of subject on participation in the trial
- xiii) Statement that participation is voluntary, that the subject can withdraw from the study at any time and that refusal to participate will not involve any penalty or loss of benefits to which the subject is otherwise entitled.
- xiv) Statement that there is a possibility of failure of investigational product to provide intended therapeutic effect
- xv) Statement that in the case of placebo-controlled trial, the placebo administered to the subjects shall not have any therapeutic effect.
- xvi) Any other pertinent information.

1.2 Additional elements, which may be required:

- i) Statement of foreseeable circumstances under which the participation of the subject may be terminated by the Investigator without his or her consent.
- ii) Additional costs to the subject that may result from participation in the study.
- iii) The consequences of a Subject's decision to withdraw from the research and procedures for orderly termination of participation by Subject.
- iv) Statement that the Subject or Subject's representative will be notified in a timely manner if significant new findings develop during the course of the research which may affect the Subject's willingness to continue participation will be provided.
- v) A statement that the particular treatment or procedure may involve risks to the Subject (or to the embryo or foetus, if the Subject is or may become pregnant), which are currently unforeseeable.
- vi) Approximate number of Subjects enrolled in the study.

CONSIDERATIONS FOR ASSENT(look for ICMR Guidelines)

There is no need to document assent for children below 7 years of age.

- For children between 7 and 12 years verbal/oral assent must be obtained in the presence of the parents/LAR and should be recorded.

For children between 12 and 18 years, a written assent must be obtained. This assent form also has to be also signed by the parents/_AR.

- Adolescents may have the capacity to give consent like adults. However, as they have not attained the legal age to provide consent, it is termed as assent and the consent of the parent/LAR should be obtained. If the latter will affect the validity of the study, waiver of consent from the relevant adult should be taken and recorded with approval of EC
- Content of the assent form has to be in accordance with the developmental level and maturity of the children
- The language must be consistent with the cognitive, social and emotional status of the child and be simple and age appropriate

Verbal/Oral consent:
Verbal assent from minor (7-12 yrs) along with parental consent
Witnessed consent:
Written assent from minor (13-18 yrs) along with parental consent

FOLLOWING ARE SOME EXAMPLES OF VULNERABLE POPULATIONS OR GROUPS:

- economically and socially disadvantaged (unemployed individuals, orphans, abandoned individuals, persons below the poverty line, ethnic minorities, sexual minorities – lesbian/gay/bisexual and transgender (LGBT), etc.);
- unduly influenced either by the expectation of benefits or fear of retaliation in case of refusal to participate which may lead them to give consent;
- children (up to 18 years);
- women in special situations (pregnant or lactating women, or those who have poor decision-making powers/poor access to healthcare);
- tribals and marginalized communities;
- refugees, migrants, homeless, persons or populations in conflict zones, riot areas or disaster situations;
- afflicted with mental illness and cognitively impaired individuals, differently abled –mentally and physically disabled;
- terminally ill or are in search of new interventions having exhausted all therapies;
- suffering from stigmatizing or rare diseases; or
- have diminished autonomy due to dependency or being under a hierarchical system (students, employees, subordinates, defence services personnel, healthcare workers, institutionalized individuals, under trials and prisoners).

DUTIES OF RESEARCHER(look for ICMR Guidelines)

- Recognize the vulnerability of the participant and ensure additional safeguards are in place for their protection.
- Justify inclusion/exclusion of vulnerable populations in the study.
- COI issues must be addressed.
- Have well defined procedures (SOPs) to ensure a balanced benefit-risk ratio.
- Ensure that prospective participants are competent to give informed consent.
- Take consent of the LAR when a prospective participant lacks the capacity to consent.
- Respect dissent from the participant.
- Seek permission of the appropriate authorities where relevant, such as for institutionalized individuals, tribal communities, etc.
- Research should be conducted within the purview of existing relevant guidelines/regulations.

KLE ACADEMY OF HIGHER EDUCATION AND RESEARCH

(Formerly known as KLE University)

[Deemed-to-be-University established u/s 3 of the UGC Act, 1956]

APPLICATION FOR FINANCIAL ASSISTANCE FOR CONDUCT OF RESEARCH BY UNDER-GRADUATE AND POST-GRADUATE STUDENTS

(To be submitted to the KAHER through the concerned HOD & Principal)

A.	To be filled by the Applicant:	
1.	Name of the student	AGAMDEEP SINGH BEDI
2.	Course / Class	MBBS PHASE II
3.	Year of admission	2022
4.	Registration No.	AA0121014
5.	Name of the Institution	J.N. MEDICAL COLLEGE
6.	Particulars of the research publications for the last three years as first / corresponding author (Hard copy should be enclosed)	-
7.	Contact details of the applicant	
	a) Mobile No.	9811293995
	b) E-mail	agamdeepsbedi@gmail.com
8.	Particulars of the research project:	
a)	Title of the research project	Bacteriological analysis of packaged drinking water available in and around Belagavi city of South India
b)	Objective	1. To determine the bacteriological analysis of packaged drinking water. 2. To test and assess the suitability of packaged drinking water from different company outlets available in and around the city.
c)	Summary of the proposed research project (up to 150 words) indicating overall aims of the research and importance of the research proposal. Application of the work in the context of national priorities of health science research, if any, may also be mentioned.	The biological contamination in drinking water is a major problem of public health in developing world. Testing water quality is a key element of drinking water safety that has been gaining increasing attention. All the packaged drinking water samples that will be taken in the study will be ISI Certified. A total of 60 samples will be collected which are supplied in and around the city. To assess the growth of bacteria at different time intervals samples will be processed. The suitability of packaged drinking water from different company outlets available in and around the city would be observed.
d)	Detailed research plan. (give here the design of study, indicating the total number of cases/samples/animals to be studied, the mode of	Cross sectional study A total of 60 samples will be collected (20 bottles) which are supplied in and around the city. Three samples from each bottle will be tested at a interval of 1 month, 3month

Day 1 (05/05/2023)

1. Sanofi-Aventis Global Development centre

Verna Industrial Estate, Verna, Goa 403722

Sanofi-aventis, the vaccines division of Sanofi, opened its global development centre (GDC) on the Goa premises in December 2007 with Rs100 crore facility in Goa - its largest in Asia and first pharmaceutical development centre in India. The centre with around 50 employees, is operational and the number could go up as the group expands its presence and accelerates growth both in India and Asia, the company said in a release.

The centre will be a hub for analytical and pharmaceutical formulation development, with capacity to develop 12 pharmaceutical compounds a year, the company said. The facility will allow the group to introduce new, quality medicines in the Asia-Pacific and global marketplace, the company said in the release. The formulation development centre has 35 bioequivalence studies, in addition to 17 patents.

The students were guided by Mr. Shrikrishna Pawar, Senior Manager, Clinical Development and Mr. Manoj Kharde, People Excellence Partner. The Industrial tour included various R and D departments viz, Analytical R and D, Formulation and Development, Spectroscopy department etc.

2. Blue Cross Laboratories

L-17, Verna Industrial Estate, Verna, Goa 403722

Blue Cross was founded in 1980. It is one of the leading research-based pharmaceutical companies in India with over three decades of experience in providing healthcare products to people across the globe with the aim of improving human life. It is driven by the vision to provide World class Quality medicines at Affordable Price. Its name today is synonymous with top quality healthcare products. They discover, develop and deliver a wide range of innovative and highly advanced pharmaceutical products covering major therapeutic segments like Antibacterials, Pain Management, Antispasmodics, Cough & Cold Preparations, Cardiology, Diabetology, Dermatologicals, Anti-ulcerants, Antipyretics etc. in different dosage forms at Affordable cost.

Students observed that the plant layout is as per the guidelines of cGMP. The different departments Production, Quality Control, Quality Assurance, Storage units, and Packaging department were shown to Students.

Blue Cross Laboratories products

- 1) Meftol -SPa
- 2) Losat H Tablet
- 3) Meftol 250 DT
- 4) TUSQ – DX
- 5) Meftal-Spas Suspension

Day 2 (06/05/2023)

3. Unichem Laboratories Ltd.

Plot No.12,13,14,17,18, Betim-Verem-Saligao Rd, Bardez, Pilerne, Pilerne Industrial Estates, Goa 403507

Promoted by the late Mr. Amrut Mody, a pioneer of the Indian pharmaceuticals business, Unichem Laboratories has grown to become one of India's most respected pharmaceutical companies. It is committed to deliver better health through superior products. By combining strategic research and in-depth industry knowledge, Unichem aims to transform itself into a global pharmaceutical drug Company with an increasing focus on cutting-edge research and developed markets. With formulations constituting the core of the company's business, Unichem is backward integrated to API Manufacturing, which adds value to the customer in terms of quality and sustainability. Inspired by an ambition to drive path-breaking innovative research, Unichem aims to enhance people's health by consistently providing better, more effective and safer products. The company offers its products in the therapeutic areas of gastroenterology, anti-infectives, anti-bacterial, diabetology, psychiatry, cardiology, neurology, and pain management, among others. Its product portfolio includes alfuzosin hydrochloride, aripiprazole, cetirizine hydrochloride, meloxicam, glipizide, paliperidone, apixaban, apremilast and solifenacin succinate, among others. Unichem also provides product development, process chemistry and manufacturing of complex API as well as dosage forms from samples and trial quantities for regulatory assistance.

BMC Campus, Nehru Nagar, Belagavi 590 010, Karnataka, India. Phone : +91 831 2471 999, Web : www.klepharm.edu, E-mail : principal@klepharm.edu

The company conducts research and development activities to develop chemical processes for APIs and contract formulations for generic companies. It operates business activities in Americas, ACASIA and European Union. Unichem is headquartered in Mumbai, Maharashtra, India.

We assisted by the HR manager and Production officer to the plant. They showed us various departments and working of these departments. Manufacturing sites and units were ideally designed and strategically located for maintaining the quality safety, efficacy and these industries products are produced by GMP and was totally followed SOP's and high tech products. The most amazing experience was to see the robotic warehousing in Unichem laboratories. Warehouse robotics is the use of automated systems, robots, and specialized software to perform tasks that streamline and automate warehouse processes.

Unichem Laboratories Ltd Goa Products

- 1) Arkamin
- 2) Carbin
- 3) Izra
- 4) Metride
- 5) Olsar H

Industrial Visit to Chromatogen Analytics, Mysuru on 9th Oct 2023

Sl. No	Particulars	
1	Name of the program	Industrial Visit
2	Program organized by (Dept.)	KLE College of Pharmacy, Bengaluru
3	Department/ Association involved	PG students and faculty members
4	Date	9 th November 2023
5	Duration	01 Day
6	Location from	KLE College of Pharmacy, Bengaluru
7	Industry	Chromatogen Analytics, Mysore
8	Objective of the program	To give the participants a valuable knowledge about application of NMR,HRMS,LCMS,GCMS in the field of pharmacy
9	Activities/Highlights of the program	Started off the journey @ 8.00am to Mysore in train ,reached Chromatogen Lab at 11.30am.We were welcomed by Dr Shankar who explained principle and applications of various instruments such as NMR, LCMS, HPLC, GCMS etc., He also provided hands on to NMR instrument where students could load the sample ,run, and integrate it with TopSin software.
10	No. of students participated	16 students
11	No. of Teachers participated	2 faculty members
12	Beneficiaries Benefited from the	Faculties and students of KLE College of pharmacy ,Bangalore
13	Outcome of the program	The participants had hand on training on NMR 400MHZ
