ABSTRACT Chronic stress causes altered metabolism as well as degenerative changes in the behavioral changes, ~~low~~ profile levels and glucose levels. Enriched environment (EE) provides desirable effects on altered metabolism. However, the effect of non-pharmacological approach (EE) on altered metabolism is unknown. Accordingly, we have attempted to address this issue by investigating behavioral changes in stress model after exposure to enriched environment. Our results evidence that chronic stress causes altered metabolism and increased anxiety-like behavior. We also observed exploration on OFT, EPM, SPT, FST, and MB reduction in the
